TUMBLER LOCK SWITCH

6 AMP — AC/DC

Security type tumbler lock switch, with single hole mounting sleeve. Quick make and break wiping action, and therefore can be considered for both medium power (up to maximum rating) or low energy circuits. All 6 Amp, 125 V, AC/DC, 3 Amp, 250 V, AC/DC — except 1261 and 1265, which are rated at 6 Amp, 125 V, AC/DC, 1 Amp, 250 V, AC/DC.

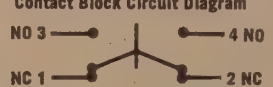
SUBMINIATURE PUSHBUTTON SWITCHES—MOMENTARY

SPEEMCO Subminiature Switches are 1/10 the volume of the standard switch. Photo is actual size of switch.
U.L. approved, 2 Amp, 29 V, DC, 1 Amp, 115 V, AC butt type contacts, combination solder, quick connect terminals supplied with standard .215" white buttons. When colored buttons are required, add 10 cents to cost of switch. Colors: black, red, yellow, green and brown.

LIGHTED PUSHBUTTON SWITCHES



These Push Button Switches, both lighted and non-illuminated as well as indicators only, offer the maximum in design flexibility. From 31 standard components, 25,344 different switches may be built. The "Building Block" concept means you can construct your own Pushbuttons through easy fingertip assembly. No tools are required. Lenses come in three shapes: round, square and rectangular; each in seven colors. Actuators are either momentary or alternate action. Snap-on contact blocks can build up to 4-pole momentary or 3-pole alternate action pushbutton switches.

The component parts have been U.L. listed for both standard duty and dry circuit or logic load applications:

Standard Duty — Silver Contacts	Low Energy — Gold Plated Contacts
5 Amps. 125 VAC	For applications under 100 Milliwatts
2 Amps. 250 VAC	Minimum rating — 10 Micro
5 Amps. 28 VDC	Amps. 50 MV

At these ratings the switches minimum mechanical and electrical life has been tested to exceed 100,000 cycles.

Contacts are momentary or alternate action depending on which Actuator-Indicator is used. Each contact block is 2 circuit and contact mechanism is of positive snap-acting design. Each contact block must be used on same polarity.

LIGHTED PUSH-BUTTON SWITCHES

molex®

Both the Molex 1175 and 1820 are lighted push button switches that are sturdy well-designed and offer a wide choice of features. They are available in alternate action; momentary normally open or momentary normally closed models. The switch snaps mount into place and are offered with spade terminals. Many variations are possible. The button comes in red, amber, white and green.

* Component U.L. & C.S.A. Recognized.

Mechanical Life of switches is 25,000 cycles. Many test out at considerably more. Bezels (1175 series only) are all high quality chrome-plated. Housings, 1175, are precision molded of durable phenolic; 1820 housings are of long lasting highest quality nylon — buttons are mar-resistant nylon. Both switches are designed for panel mounting. Minimum panel thickness .031". Mounting clips supplied with 1175-1820 have integrally molded mounting ears. Terminals are standard ¼ male tab for 1175; ⅜ male tab for 1820. Use WALDOM female Q-D terminal SS-1090 and SS-1187 respectively. Tabs also have solder hole for soldering wire lead if desirable.

NOTES:

1. Pricing includes permanently installed lamp, 6-volt application, Bulb No. 2114; 14-volt application, Bulb No. 2182; 125-volt application, NE 2H, 35K resistor.
2. a. Push-On; Push-Off — add suffix PP to catalog number.
   b. Momentary-Normally Open — add suffix MNO to catalog number.
   c. Momentary-Normally Closed — add suffix MNC to catalog number.
3. Buttons available in White, Red, Green, and Amber. Add first initial of color to suffix after designating switch action and button color.
4. Two standard legends ar available. They are OFF and ON. Add actual word to catalog number after designating switch action and button color.
5. Color of hot stamping on button is standardized as follows:

HOT STAMPING COLOR
White
Black

BUTTON COLOR
Red, Green, Amber, White

Recommended Panel Cutout Dimension:
1175 Switch 1.115" x .915"
1820 Switch 1.215" x .500"

ORDERING EXAMPLES:

(a) To obtain a 6-volt unit, momentary action normally open, with red button and no legend—specify Catalog No. 117510-MNO-R for 1175 series or 182010 — MNO-R for 1820 series switch.

(b) To obtain a 125-volt unit, push-on, push-off, with yellow button, hot stamped START — Specify Catalog No. 117590-PP-R ON for 1175 series or 182090 PP-R ON for 1820 series switch.

Dimensions of 1820 Swith:
Bezel Dimensions — 1 3/32" x 3/4"
Button Size — 1 3/16" x 3/16"
Depth of Housing — 2 1/4"

SOLDERING IRONS AND ACCESSORIES

Specify voltage, wattage and other options on each order. If your plug needs differ from standard (plug cap on 2-wire cord, NEMA-type plug on 3-wire cord) specify plug manufacturer's name and catalog number.

For complete catalog of AB soldering equipment, ask for Catalog No. 230CP.

LITTLE DANDY

The World's Most Unique Line of Practical Solder Handling Tools.

EDSYN'S Soldering, Desoldering and Resoldering product line offers customers the widest range of solderability. Soldapullt desoldering tools vacuum up solder swiftly and efficiently. ERSA Soldering tools offer fast soldering cycles. Our Soldavac desoldering tool is a new model featuring both good performance and low cost. EDSYN'S Soldasip Resoldering Tip is our first of a continuing venture into the field of soldering. The Soldasip Resoldering Tip was designed with the capability to both apply solder or sip it up. It also has incorporated in its design a temperature adjust range from high to medium to low. Soldasip Resoldering Tip sells for the same price as an Ersadur replacement tip. With all these added features, your cost does not increase — only your solderability. To help acquaint you and increase your solderability, EDSYN is offering an experimenter's solderability kit. TRY IT! on a 30-Day Free Trial. Order X-34.

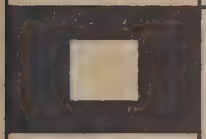
GREENLEE TOOL CO

A Unit of Ex-Cell-O Corporation XLO

CHASSIS PUNCHES



ROUND, SQUARE, "KEY," AND "D" TYPES

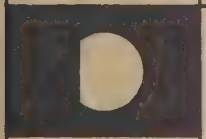
NO. 730 ROUND PUNCH

Swiftly cuts clean, accurate holes in radio chassis for sockets, switches, controls and other equipment. Operates simply with an ordinary wrench for drive power . . . just insert in a small drilled hole and turn drive screw. No reaming or filing . . . hole is smooth, perfect. 29 sizes from 1/2" to 3 1/8" diameter. New Ball-Bearing Drive available for even easier, speedier operation.

NO. 731 SQUARE PUNCH

Cuts square or oblong openings as desired. Available in five sizes for making 1/2", 5/8", 3/4", 7/8", and 1" square holes. Drive screw fits into 1/2" hole, which can be drilled or made with 1/2" No. 730 GREENLEE Round Punch. Operates with an ordinary wrench for drive power. Individually packed.

NO. 731-R KHP RELAY PUNCH



Makes clean, accurate, *finished* holes in up to 16-gauge metal for Potter & Brumfield KHP miniature relay sockets. Makes 1.015" x .859" hole.

NO. 732 "KEY" PUNCH

Quickly, easily cuts holes for keyed radio sockets. Operates on same principle as other GREENLEE Radio Chassis Punches . . . an ordinary wrench supplies the drive power. In five sizes to make openings of 15/32", 15/16", 1 11/64", 1 17/64", 1 21/64". Drive screw fits into 1/2" hole. Individually packed.

NO. 733 "D" PUNCH

Simplifies and speeds the work of making "D"-shaped openings for high-frequency, miniature tube sockets and other equipment using this type opening. Available in 1/2" and 5/8" sizes. Operates on same principle as other GREENLEE Radio Chassis Punches with an ordinary wrench supplying the drive power. Drive screw fits into 3/8" drilled hole. Individually packed.

NO. 734 DOUBLE "D" PUNCH

Quickly makes standard electrical receptacle openings. Cuts standard hole 1 1/8" dia. across parallel sides, 1 3/8" dia. across rounded ends. Simply insert into a 1/2" hole and turn with an ordinary wrench. Does the work in less than five minutes . . . eliminates all tedious hand filing . . . gives a smooth, perfect opening.

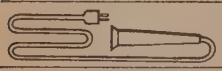
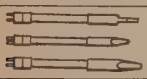
SOLDERING IRONS





6 to 240 VOLTS 12 to 140 WATTS

A complete line of high quality soldering irons specifically designed for production-line soldering in the electronic, instrument, and communications industries — including irons for soldering miniature and subminiature components. Also ideally suited for intermittent operations such as repair, maintenance, laboratory work, and electronic kit construction. Irons up to 1250 watts are available.

PENLINE-120 SOLDERING IRONS — 120 VOLTS; 25, 30, 40 AND 45 WATTS

Lowest cost GE iron; ideally suited for light to medium production in electronics, communications, and allied industries, for repair and maintenance operations, and by the "do-it-yourself" electronics kit builder.

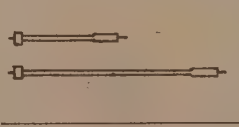
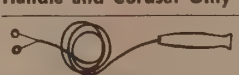
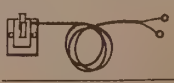
TEMPERATURE CONTROLLED SOLDERING IRON — 120 VOLTS; UP TO 135 WATTS







2½-ounce temperature controlled soldering iron maintains selected temperature which can be varied for wide range of work without changing irons or tips. The iron's 135-watt capacity enables it to handle high-mass joints, yet its precision temperature control makes it suitable for the smallest of microminiature jobs without exceeding temperature limitations. Ideal for high production and high quality work, laboratory use, service shops, and wherever temperature limits are specified.

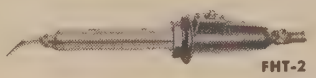
FLAMELESS HEAT TORCHES



Pinpoints heat precisely where you want it. Ideal for shrink-tubing, plastic welding, heating micro-parts or constricted areas. Your choice of predetermined temperatures from 200°–1000°F. Uses shop air or inert gas; weighs one pound. Furnished with 10-ft. hose, 3-wire cord and stand.

Torch elements — an element of your choice is included with each torch (see chart). Specify model number and wattage. If no element is specified, a 550 watt, 120V element will be supplied. 230V elements are available.

Accessories and attachments: a. Universal multipurpose tip; supplied with each torch. Part No. SS-1. **$5.00. b. Combination welding and tacking tip;** eliminates need for two tips during welding. Part No. SS-2. **$8.50. c. Universal high-speed welding tips;** for ⅛″ and 5/32″ plastic welding rod. Part No. SS-3. For 3/16″ plastic welding rod, Part No. SS-4. Either size **$27.50. d. MICROFLAME, INC. GAS WELDERS

DEALER PRICE SCHEDULE

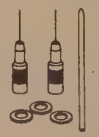
MICROFLAME DELUXE TORCH KIT NO. 4000

The Deluxe Microflame Torch Kit contains the Microflame Torch, 6 oxygen cylinders, 3 LP gas cylinders, spark igniter, 3 welding tips, 4 six inch gold/silver alloy brazing rods, a two-way bench bracket for mounting on bench or pegboard PLUS booklet on "HOW TO WELD."

MICROFLAME INDUSTRIAL TORCH NO. 5000

The Industrial Torch is comprised of the basic Microflame Torch plus large capacity oxygen and LP tanks, valves, regulator and accessories. Oxygen capacity is 75 liters; LP gas capacity is 26.7 fluid ounces. The Industrial Torch set is packaged in a heavy-duty carton.

MICROFLAME TORCH NO. 1000



The Microflame Torch is a self contained, miniature gas welding tool which produces over 5000° pin-point flame using miniature gas cylinders. It is designed for welding, brazing and soldering of small parts, and is basically applied like standard gas welding equipment. Supplied complete with cylinders.

BRAZING ROD KIT NO. 3100

Now, for the first time, there is a complete MICROFLAME torch brazing kit that enables you to securely join together all the various metals found in the home or shop. Kit includes the following: Silver Solder Rods, Aluminum Solder Rods, Silver Solder Flux, Aluminum Solder Flux, Sandpaper, Fiberfrax* board, Complete Brazing and Solder Instruction Manual.

* Fiberfrax is a registered trademark of Carborundum Company

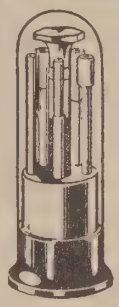
Moody® PRECISION HAND TOOLS

Screw Driver & Awl Set

Contains four interchangeable screw driver blades and an awl. Complete with swivel top, knurled chuck type handle.

Sizes .055", .070", .080", .100", awl

Cat. No. SC-5 **List $2.50**

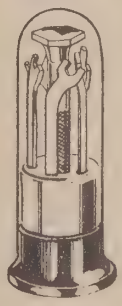


Socket Wrench Set

Five interchangeable box or socket wrenches that fit the same magnetic handle. Thread sizes #00, #0, #1.

Sizes (all hex) 5/64", 3/32", 7/64", 1/8", 5/32"

Cat. No. BW-5 **List $5.50**



Offset Open End Wrench Set

Contains five offset open end wrenches, interchangeable in the chuck handle.

Sizes 5/64", 3/32", 7/64", 1/8", 5/32"

Cat. No. OE-5 **List $3.50**

Tap Drill Set

Contains five tap drills. Handle has a solid-locking chuck-nose and swivel-top. A companion piece to the Moody TS-5 Tap Set.

Drill Sizes 3/64", #53, #50, #47, #43

Cat. No. 70 **List $5.50**

Cross Recessed Driver & Allen Type Wrench Set

Contains five interchangeable tools with chuck-type, swivel top handle. A torque hole in the handle enables fastenings to be set up tight.

Cross recessed drivers #0, #1
Allen type wrenches #4, #6, #8

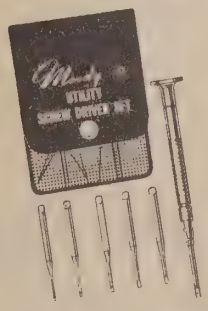
Cat. No. PA-5 **List $3.50**

Tap Set

Contains five interchangeable taps and handle for cutting inside threads. Torque hole in handle enables you to maintain a steady firm leverage.

Tap Sizes 0-80, 1-72, 2-56 3-48, 4-40

Cat. No. TS-5 **List $10.00**

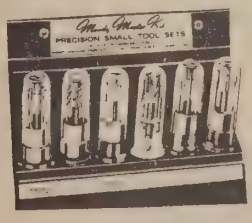


Utility Screw Driver Set

Consists of a precision screw driver and six interchangeable blades. The screw driver handle is knurled for positive gripping.

Sizes .025", .040",.055", .070", .080",.100"

Cat. No. 52 List $3.25



Machinist Scriber

Approximately 8½" overall with a right angle point and a straight point, both properly tapered and swaged into a knurled aluminum finger grip handle.

Cat. No. MS-2 **List $1.10**

Moody Master Kit

A popular compact kit of six tool sets, stored in a leatherette case. Contains Screw Driver & Awl Set, Cross Recessed Driver & Allen Type Wrench Set, Socket Wrench Set, Offset Open End Wrench Set, Tap Drill Set, Tap Set.

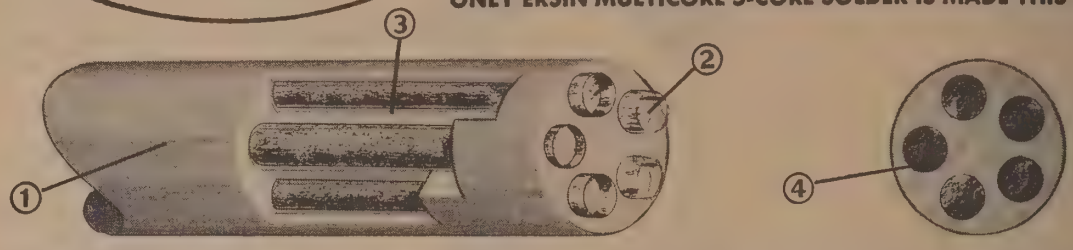
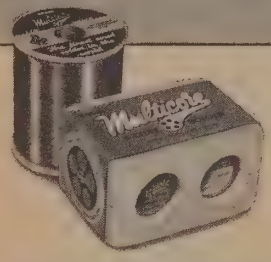
ERSIN



Multicore

5-core wire rosin solder

Available in 1-lb. and 7-lb. reels



This is no ordinary solder!

ONLY ERSIN MULTICORE 5-CORE SOLDER IS MADE THIS WAY

These illustrations show the construction of ERSIN Multicore 5-Core Solder. Multicore solder is made only from pure virgin metals (1) with 5 cores of exclusive extra-active, non-corrosive ERSIN Flux (2). Multicore's special manufacturing process locates the 5 cores of ERSIN Flux close to each other and at the perimeter, so that there is only an ultra-thin wall of solder between the cores of flux and the work (3). This unique core configuration (4) also keeps the flux near the heat source, to melt faster—wet the metal more effectively. This enables ERSIN Multicore solder to produce the consistently reliable joints for which it is known.

Conforms to Federal Specification QQ-S-571

EXCLUSIVE PACKAGING IN POLYSTYRENE AND SKIN-WRAP FOR UTMOST PROTECTION IN SHIPPING AND STORAGE

STANDARD TIN/LEAD ALLOYS AND GAUGES

Available from stock: 63/37; 60/40; 50/50; 40/60; Savbit; Special Alloys—H.M.P. (High Melting Point, 565° F.); L.M.P. (Low Melting Point, 354° F.). Other alloys upon request.

Gauges: 14 s.w.g. (.080") through 24 s.w.g. (.022"). NOTE: Soldering iron tips should always be 108° F. above melting point of alloy.

NEEDLE FINE GAUGES

For microminiaturization, integrated circuits and other similar requirements. Off-the-shelf delivery in alloys 63/37 and 60/40, in even gauges from 28 s.w.g. (.014") through 34 s.w.g. (.009").

COPPER LOADED SAVBIT ALLOY

Copper-loaded SAVBIT stops the wear and erosion of copper soldering iron tips...increases tip life by 1,000%.

Characteristics and specifications: Savbit Alloy is available in Ersin Multicore 5-core solder containing non-corrosive extra-fast Ersin Flux in 14, 16, 18, 20, 22 and 24 gauge. Melting point: Virtually the same as standard tin/lead alloys. Excellent conductivity, tensile and shear strength.

HIGH PURITY EXTRUDED BAR SOLDER

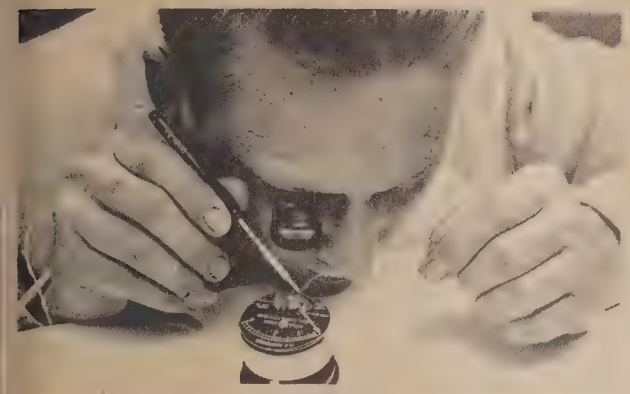
The same superior quality solder as in Multicore 5-Core Wire Rosin solder. Highest purity is achieved by advanced quality control, possible only with the Extrusion process. Extreme uniformity and smooth texture, without the cross-graining of cast bars. Virgin metals. Conforms to Federal Specification QQ-S-571d with respect to alloy composition in Sn60 (60/40), Sn63 (63/37), and Sn50 (50/50). Skin wrapped for distributors; bulk-packed for manufacturers. Also, low antimony "EXTRUSOL" Commercial Bar Solder—bulk packed.

ERSIN LIQUID FLUXES

Made to the high quality standards of Ersin Multicore. Three formulas. No. 5380 meets Military Specification MIL-F-14256C, Type A (Activated). No. 0360 meets Military Specification MIL-F-14256C, Type W (Non-activated). Other commercial liquid fluxes available such as: No. 4370 highly activated commercial flux. Foam, water soluble, protective coatings and cleaners upon request.

NEW SOLDERABILITY TEST MACHINE

A precision instrument to determine the solderability of component termination wires that operates on a principle entirely different from, and superior to, the immersion method—electronic digital timing. Accurate, positive, totally reliable, yet economical because no technician is needed to operate it, and tests are run with great rapidity. Developed in association with I.E.C. Built in England by Multicore Solders, Ltd. Complies with I.E.C. Publication 68-2 Test T. Descriptive literature available on request.



FREE evaluation test samples, "Modern Solders" technical booklet, and fully detailed information on any of these products will be sent promptly. Address request, on company letterhead, to: Multicore Sales Corp.

ORYX

PRECISION SOLDERING EQUIPMENT

WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

1. MINIATURE SIZE

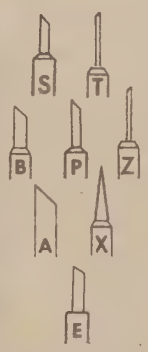
ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat within the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.



LOW-VOLTAGE SOLDERING IRONS

MODEL S-S—(As shown in photograph). Eyepiece model less than 5" long, for precise finger control. Weighs 7 grams. Nominal temperature 575°F. Furnished with 1/16" S tip. Also takes T tip. 4.5-volts, 4.5-watts (Use 54204-T tapped transformer for 4.5 volts) .....Net $5.95

MODEL 6A—The most popular Oryx soldering iron. Designed for printed circuit soldering. Weighs only ¼ oz. Nominal temperature 690°F. Furnished with 3/32" removable B tip. Also takes other tips listed below. 6-volts, 6-watts. Net $5.95

MODEL 9-6—Similar to model 6A, but greater heat capacity. Weighs ¼ ounce. Nominal temperature 750°F. Furnished with 1/32" A tip. Also takes B tip. 6-volts, 8.3 watts $5.95

MODEL 11-6—Special model for high-temperature solders. Temperature 835°F. Weighs ¼ oz. Furnished with 3/32" solid nickel E tip. Nickel tip provides long life at high temperatures. 6-volts, 10-watts .....Net $7.45

TRANSFORMER

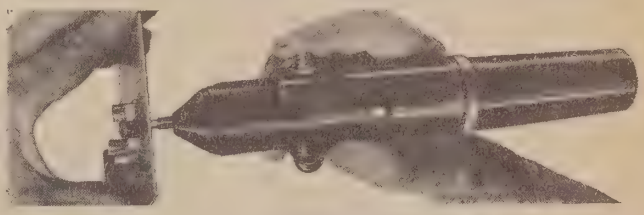
for low-voltage soldering irons.

TAPPED TRANSFORMER—Output 4½ to 6-volts in ½ v. steps. For exact temperature control on all ORYX 6-volt tools. Operates on 115 V. AC—ready to plug in. Model 54204-T .....Net $7.80 ea.

TELVAC

LABORATORY TOOLS / APPARATUS

VACUUM TWEEZER SYSTEM



This new parts-handling system positively and precisely lifts parts varying in size from microscopic to those weighing several ounces. Parts are handled without damage or contamination. Defects caused by pinching, scratching, or marring are eliminated. Critical surfaces are protected. Vacuum is turned on and off with forefinger. For 115 V. A.C. Complete system, ready to plug in.

Complete System K-150

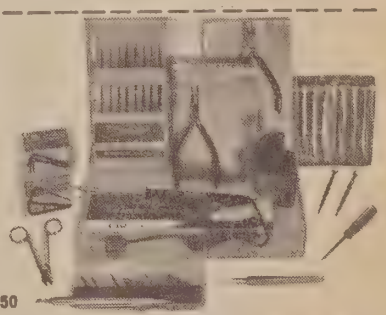
"IN-CIRCUIT" TRANSISTOR TESTER



A new test instrument for the circuit designer or test technician. Makes rapid "go-no go" evaluations of semiconductors while they are still in the circuit. Checks cut-off and conduction on PNP and NPN transistors and diodes without the need for costly unsoldering. To use, the operator sets the selector switch to NPN or PNP. He then presses the tester's sharp spring-loaded pins (arranged in TO-5 configuration) against the transistor's printed circuit connections. Open and shorted transistors are readily identified by noting the condition of the tester's pilot light. Diodes and unmounted transistors are similarly tested using a set of extending leads and clips. An optional 7-position diode adapter may be used to test diodes in the circuit. Furnished complete with extending leads and alkaline battery, ready to operate.

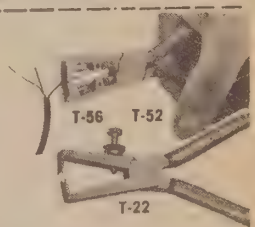
MODEL SC-4 TESTER .....Net $74.50 ea.
MODEL 1330 DIODE ADAPTER .....Net 19.50 ea.

INSTRUMENT REPAIR KIT

A 35-piece kit of fine precision tools for the instrument shop or laboratory. Includes miniature soldering iron, taper-jaw diagonal cutter, needle-nose plier, precision screwdriver kit, tiny stub-nose scrissors, eye loupe, needle-file set, 11-piece knife set, hex wrench set, spline-key set, soldering aid set, and a precision Dumont-type tweezer.

MODEL K-50..... Net $59.50

NEEDLE FILES



Precision Swiss needle files with vinyl cushion finger grips. Set of 8 precision Telvac files in plastic case. No. 3 cut.

Cat. No. 2000 (4" styles) ..... Net $6.95 ea.
Cat. No. 2100 (6¼" styles) ..... Net 8.95 ea.

WIRE STRIPPERS

Unique wire-stripping pliers. Just squeeze and pull! Models T-52 and T-56 require no operator adjustment. Use T-52 for #8 to #24 wires and T-56 for #18 to #28 wires. T-22 is set by operator to required wire size from #8 to #24. Tool steel heads have razor-sharp edges. All models have red vinyl cushion grips.

T-52 .....Net $8.35 ea. **T-56** .....Net $11.95 ea. **T-22** .....Net $4.95 ea.

SOLDERING AND DE-SOLDERING EQUIPMENT

Designed BY Professionals FOR Professionals

Choose from Ungar's three lines of precision soldering and de-soldering equipment . . . The STANDARD, IMPERIAL and PRINCESS. Each offers full-scale interchangeability of components – handles, heating units, soldering tips and tiplets, de-soldering tips and accessories.

THE STANDARD LINE	For most electronic soldering. Designed for the production line, lab technician and electronic service technician.
THE IMPERIAL	The most versatile line for continuous production line usage . . . sub-assembly and systems work.
THE PRINCESS LINE	For precision soldering in micro-miniature circuitry.

Each line is designed to let you custom-tailor your soldering iron to meet your individual requirement.

UNGAR MAKES IT EASY TO SELECT THE RIGHT HEATING ELEMENT FOR EVERY SOLDERING REQUIREMENT.

NEW UNGAR QUICK HEAT SOLID STATE SOLDER GUN

WEIGHS ONLY 5 OZ.!

Designed for damage-free soldering of sensitive semiconductor devices by servicemen, lab technicians and electronics hobbyists. For replacement purposes, soldering tips are independent of the heating cartridge. Tip is electrically isolated from the heating element with a grounded 3-wire cord set. Heat cardridge locks into the gun barrel by means of a knurled nut; loosening the nut allows rotation of the entire cartridge to orient the threaded-on tips to any desired position. All basic parts are separately replaceable. Unit has a power indicator lamp. A HI-LO dual-heat, selector switch allows a choice of 500°F or 900°F tip temperature range. Complete unit comes with heat cartridge, interchangeable tellurium copper soldering tip, and 3-wire cord with NEMA plug. Weight, 5 oz. less line cord.

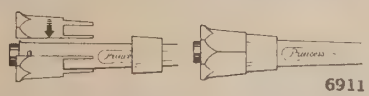
Ungar. / Princess® SOLDERING TOOLS, ACCESSORIES

6902 Handle



Miniature soldering iron designed to meet requirements for precision micro-electronic circuitry and high density assembly. Offer thermo-efficiency and work capacity never before achieved in small feather-weight irons. Slim design, turquoise handle assures deft soldering. Choice of easy-to-assemble units thread together for versatility in tip shapes and temperature capabilities. Low initial investment, economical maintenance and inexpensive parts replacement.

PRINCESS HANDLES Slim, cool design is molded of heat-resistant nylon pastel turquoise color. Midget thread-in socket accepts any Princess heat capsule. Choice of 2-conductor and 3-conductor (NEMA) vinyl-covered cords. For 120V AC/DC operation. Weight: .05 oz., less cord; 3.0 oz., with cord.

XLS Pencil Iron

One handle fits 9 elements

Lightweight pencil series features quick element interchangeability and highest performance. Cool, unbreakable blue polycarbonate handle takes heating elements from 11 to 75 watts. Each can be changed by line operator without special tools. Available with either 2 or 3 wire cord. Uses regular or iron plated tips. Elements encased in long-life stainless steel jackets.

DH (DUO HEAT) Pencil

Pat. Pending

Developed for use in intermittent soldering operations

Revolutionary lightweight pencil operates continuously at low heat, but has higher heat available when needed. Constant low heat is adequate for light to medium jobs, get high heat instantly by pressing handle switch; tip and element life infinitely increased. Indestructible molded handle stays cool and comfortable. Wide variety of plug-in tips easily interchangeable.

Model	Continuous Low Heat	High Heat
DH-1	15W 520°F	47W 920°F
DH-2	20W 630°F	53W 975°F

IDL INSTANT DEPENDABLE LASTING IRON

Pat. Pending

3 oz. pencil controlled by thermal time delay relay

Heats in seconds. No transformer. When handle button is depressed 180W element heats initially until soldering temperature is reached. Thermal time delay relay then cuts in 40W element automatically. Pencil cannot overheat. Interchangeable plug-in 1/8″ tips need no special tools to change. Unbreakable handle stays cool. Especially good for diversified light to medium jobs.

Trig-R-Heat Gun

Feather light 14 oz. gun has no transformer. Reaches hard-to-get at spots easily. Tips will not deform. Heats and recovers instantly. Rugged, precision built. Tip and element assemblies changed easily.

RATCHET DRIVERS QUALITY FASTENERS

VACO POW'RIVETS . . . the blind rivet for foolproof fastening every time

Step 1 Step 2 Step 3

THERE IS A DIFFERENCE! Only Vaco Pow'-Rivets adapt to hole size variance, and pull up snug regardless of material thickness. That's why 4 sizes do the job of 11 ordinary rivets. Three step illustration at left shows unique "bubble action" sequence which assures positive, goof-proof fastening every time.

UNCONTROLLED SOLDERING TOOLS...

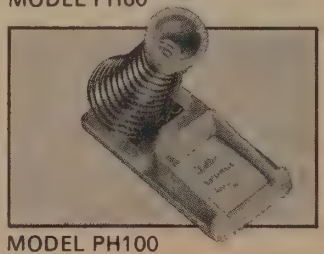
For lowest cost soldering operations not requiring high efficiency tool.

MODEL W30

MODEL W30. Uncontrolled line voltage soldering tool. All stainless steel construction, 30W, 120V, 2 wire cord, with 1/4" screwdriver tip. New cool blue color. Model W30-3, 3 wire cord set.

MODEL W50

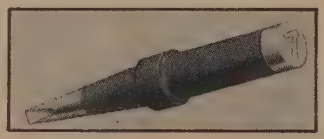
MODEL W50. Uncontrolled line voltage soldering tool. All stainless steel construction. 50W, 120V, 2 wire cord, with 3/8" screwdriver tip. New cool blue color. Model W30-3, 3 wire cord set.



SOLDERING TOOLS STANDS...

Have heavy cast iron bases and built-in sponge holders. Design precludes any possible heat sinking of Weller controlled tools. New cool blue color.

MODEL PH60



MODEL PH60. Accommodates Weller Models W30, W60, and any soldering tool with a barrel diameter up to 15/32".

MODEL PH100

MODEL PH100. Accommodates Weller Models W50, W100 and any soldering tool with a barrel diameter up to 19/32".

TIPS AND ACCESSORIES

All Weller Industrial Soldering Tips have unique heavy iron plating with anti-oxidation coating thereby eliminating freezing... No other tip offers these features!

Weller Dual Heat Soldering Guns

The original and most widely used guns with features that are still unmatched.

3 Dual Heat Models

Model 8200—100/140 watts
Model D440—145/210 watts
Model D550—240/325 watts

Trigger controlled dual heat. Two trigger positions permit instant switching to high or low heat to suit the job.

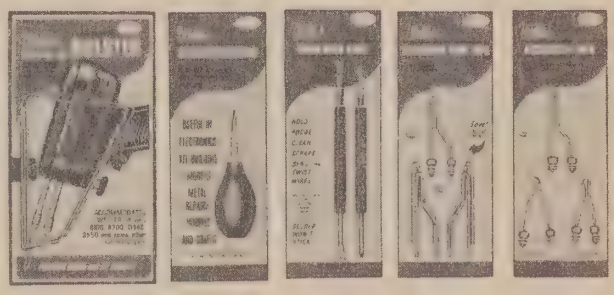
Instant heat. Tip reaches full heat a few seconds after trigger is pulled. Heat goes off when trigger is released.

High efficiency tip slips easily into difficult places.

Spotlight illuminates work, eliminates shadows.

Maximum operating comfort. Compact design and perfect balance make precision soldering easy, eliminate fatigue.

New Weller Soldering Accessories on hang cards



Soldering Gun Holster for all Weller guns. Prevents burns and tip damage. Screws to bench leg or wall. No. AC100.

Desoldering Bulb. A must for neat removal of solder. Useful in kit building, electronics, metal repairs. No. AC303P.

Soldering Aids. Two double-end tools have reamer, fork, brush and scraper. Handy for work with wires. No. AC300P.

Soldering Gun Tips. Five replacement tips plus two tip nuts. For Weller Gun Models 8100, 8200 and D440—No. AC101P. For Weller Gun Models D550, 8250A and 8250C—No. AC102P.

Accessory Tips. Three tips for soldering, cutting, smoothing. For Weller Gun Models 8100, 8200 and D440—No. AC103P. For Weller Gun Models D550, 8250A and 8250C—No. AC104P.

Weller TEMPMATIC®

Temperature Controlled Soldering Tool

Does both light and heavy duty soldering. Most versatile portable soldering tool on the market. Does the work of a pencil iron and soldering gun. Exclusive replaceable POWERHEAD contains Weller's temperature control system. Protects components in delicate work situations. Yet the tool also does heavy soldering jobs. Heats fast. Recovers fast. Weighs only 7 ounces.

Model GT7A comes with 700°F. chisel point POWERHEAD.

Model GT6B comes with 600°F. conical point POWERHEAD.

Weller MARKSMAN Irons

Rugged, general purpose irons featuring stainless steel barrel, replaceable tip. Model for model, they outperform bigger irons that cost more.

MODEL NO.	WATTAGE/ 120V	WEIGHT

ESSEX Stancor/RBM | STANCOR

OUTPUT TRANSFORMER CHART

A simplified selection of the proper transformer for use as a replacement in radio receivers or in the construction of audio amplifiers. **To use this chart,** check the first column for the tube being used, then read across for the applicable operating characteristics and correct Stancor transformer. In most cases, two Stancor part numbers are indicated in order to give a choice of Mounting styles.

OUTPUT TRANSFORMERS
TECHNICAL DATA

The Constant Voltage Line Sound Distribution Systems have become the most widely accepted systems in use today. They offer the Sound Engineer an easy means of establishing the volume level of each speaker in a system without the use of potentiometers or similar devices. The proven simplicity and versatility of these systems minimize the problem of speaker impedance mismatching thereby insuring high quality sound reproduction and minimum power losses. The use of higher power driving the constant voltage lines also helps to lower power losses over longer distances.

Most of the newer P.A. amplifiers have a designated 25 volt, 70.7 volt or 140 volt outlet on the output transformer, but almost any older amplifier has an impedance tap which may be used for the desired voltage output.

To insure a steady maintenance of the desired line voltage, it is recommended that the amplifier should be *capable* of producing 1½ times the total power of the various speakers connected. Hence, if the sum of the speakers equals 25 watts, the driving amplifier should be *capable* of producing 37½ watts. The power and impedance figures shown here with the formulas are based on the total power actually supplied to the speakers and *not* on the maximum *capability* of the amplifier.

The following table lists various amplifier power outputs with the corresponding impedance tap on the output transformer which will supply these three basic line voltages:

POWER OUTPUT	IMPEDANCE FOR 140 VOLT LINE	IMPEDANCE FOR 70.7 VOLT LINE	IMPEDANCE FOR 25 VOLT LINE
WATTS	OHMS	OHMS	OHMS
5	4,000	1,000	125
10	2,000	500	62.5
15	3,333	333	41.7
20	1,000	250	31.2
25	800	200	25
30	666	166	21
40	500	125	15.6
50	400	100	12.5
60	333	83	10.5
80	250	62.5	7.8
100	200	50	6.3

For power ratings not shown in this table, use the following formula:

$$Z = \frac{E^2}{W}$$

Z = Ohms
E = Volts
W = Watts Output

Impedance Tap for:

$$\text{140 volt line} = \frac{20{,}000}{W}$$

$$\text{70.7 volt line} = \frac{5{,}000}{W}$$

$$\text{25 volt line} = \frac{625}{W}$$

To establish the volume level of the various speakers in the system, it is necessary to know the power output of the amplifier and the power desired at each speaker. To choose the correct line transformers, match the power to be delivered to each speaker with the power tap on the line transformer. Then connect the primaries of the line transformers in parallel to the proper voltage tap on the output transformer of the amplifier. When the sum of the power ratings shown on each line transformer is equal to the power rating of the amplifier, and the speakers are connected to the appropriate secondary taps, the system is correctly matched.

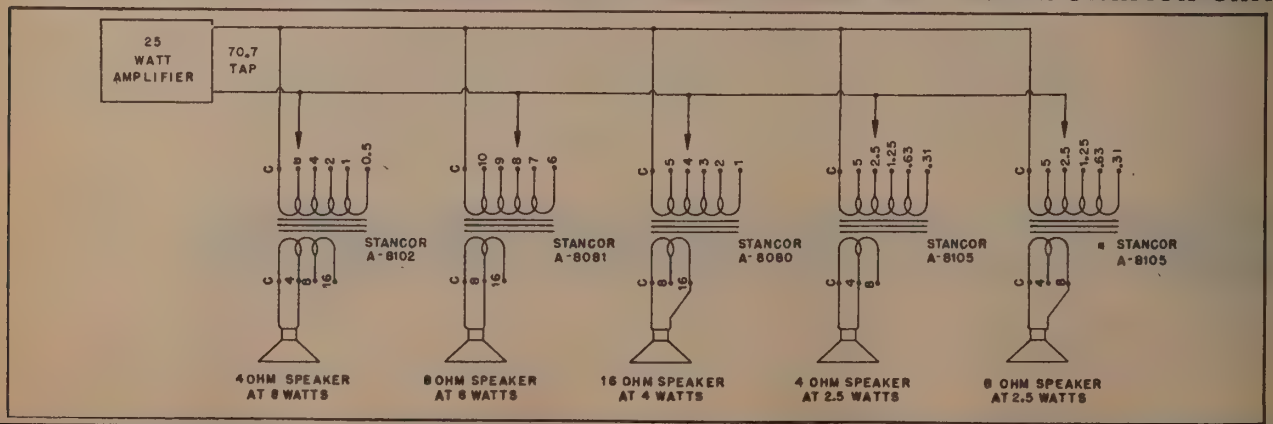
To determine the proper tap on the primary of the line transformer for a given wattage input to the speaker, use the formula:

$$Z = \frac{E^2}{W}$$

EXAMPLE: In a 70.7 volt system, assume that the speaker requires 5 watts. What is the impedance of the tap required to produce this wattage?

$$Z = \frac{E^2}{W} = \frac{70.7 \times 70.7}{5} = \frac{5{,}000}{5} = 1{,}000 \text{ Ohms}$$

To determine the wattage input to the speaker when the tap is already connected, use the formula:



$$W = \frac{E^2}{Z}$$

EXAMPLE: In a 70.7 volt system, assume a speaker connected to the 500 Ohm tap of the primary of the line transformer. What wattage is produced by the use of this tap?

$$W = \frac{E^2}{Z} = \frac{70.7 \times 70.7}{500} = \frac{5{,}000}{500} = 10 \text{ Watts}$$

REMEMBER: Each speaker must have its own line-matching transformer and all of the line-matching transformers are connected in parallel to the proper voltage tap on the output transformer of the amplifier.

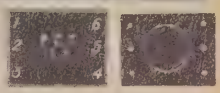
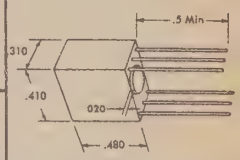
MINIATURE AUDIO TRANSFORMERS

ESSEX Stancor/RBM | STANCOR



POLYCHROMATRANS With Multiples of 0.1" Grid Spacing for Printed Circuits.

COLOR CODING by application to assure immediate and positive transformer identification.



RECTANGULAR SHAPE allows the utmost utilization of space and stacking in limited area.

PROTECTIVE STAND-OFF prevents solder flow-back and maximum lead exit protection.

SPACED LEADS of fatigue resistant gold plated nickel-iron alloy are .020" in diameter, 5/16" long and have multiples of 0.1" grid spacing for printed circuit application.

ULTRA MINIATURE

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power.

These transformers are designed primarily for transistor audio applications but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations.

POWER TRANSFORMERS

Stancor's broad line of commercial grade power transformers offers a choice of standard mounting styles. Listings are in ascending order of plate-supply voltage for ease of selection.

All units are designed and built to meet the exacting requirements of EIA for electrical tolerances, dielectric strength, temperature rise and construction. All are insulated with class A materials; (105°C max. operating temperature).

Transformers designed for full-wave C.T. rectification with capacitor input filter may be used with choke input filter allowing an increase in D.C. current of 30%.

Transformers designed for full-wave C.T. rectification with choke input filter may be used with capacitor input filter requiring a decrease in D.C. current of 25%.

CONSULT FACTORY for detailed information concerning electrical rating and/or mechanical characteristics.

SELECTING THE CORRECT POWER TRANSFORMER

STEP 1. Check rectifier tube and all other tube filament voltage and current requirements.
STEP 2. Add together total current drawn by:
A. Plates and screen grids
B. Resistor networks
Select a power transformer which will supply maximum required D.C. voltage at total current before filter.
STEP 3. Check type of rectifier, circuit, filter and load to obtain required secondary A.C. voltage from transformer.

EXAMPLE: Power transformer for typical 10 watt audio amplifier.

Quantity of Tubes	Type Number of Tubes	Filament Voltage	Filament Current
1	5Y3-GT	5.0 V	2.0 A
1	12AX7	6.3 V	0.3 A
2	12AU7	6.3 V	0.3 A (each)
2	6AQ5	6.3 V	0.45 A (each)

Total filament and heater requirements are: { 5.0 V @ 2.0 A / 6.3 V @ 1.8 A

Maximum D.C. voltage after filter: 285 volts.
At input capacitor of filter it will be approximately 325 volts D.C.

Current ratings for various amplifier stages (approximate):

12AX7	RC Coupled	2 ma. (total both sections)
12AU7	RC Coupled	10 ma. (total both sections)
6AQ5	(thru output transformer)	74 ma.*
		86 ma.

Tube characteristic data for the 5Y3-GT rectifier tube with capacitor input filter indicates an A.C. voltage requirement of approximately 335 volts R.M.S. per plate.

Selection based on total requirements: PC-8410 or PM-8410 depending on physical mounting style used.

* Includes screen grid current for each tube in the output stage.

† With Copper shorting band to reduce external Magnetic Field.
▲ Primary for 117-107 Volts.

Each transformer has the winding arrangement and terminal numbering shown in the schematic diagrams above. The primary winding is connected to terminals 1, 2, 3 & 4. A separate winding is connected to terminals 5, 6 & 7 that may be used in series with the primary to raise or lower the secondary voltage output. A variety of combinations is possible using the taps on both windings, plus the "Aiding" or "Bucking" action of the extra winding.

Designed for 117 V. 50/60 cycle operation; may also be satisfactorily operated at 400 cycles.

The secondary winding of each transformer consists of two identical windings connected to terminals 8 & 9 and to 10 & 11 respectively. Use the tables showing the various output voltages for specific terminal connections as your guide. Many combinations are possible other than those listed in the tables.

All ratings shown are for normal convection air cooled applications. Select only rectifiers capable of handling the output voltages and currents described

Note: Filtering shown permits maximum output ripple voltage of 3% or less.

★Quantity Shown is Total Number used in a given circuit. Rectifiers should be equivalent to Sarkes Tarzian numbers shown.

*Surge protection resistors are recommended when capacitor input filters are used. Allow 3.3 ohms per 70 volts R.M.S. applied voltage. Transformer secondary winding D.C. resistance may be used as part or all of the amount required.

STANCOR BULK TRANSFORMER PROGRAM AT OEM PRICES THROUGH DISTRIBUTORS

Need transformers in a hurry for that rush job — (what other kind is there)? The probability is that STANCOR has the type you need — in stock and available for IMMEDIATE DELIVERY through your STANCOR distributor. Here is the best, fastest and most economical way to solve your problem:

- Make your selections from STANCOR's catalog or the complete listings in Radio Electronic Master. Chances are you will find just the ratings you need.
- Order samples from the STANCOR distributor of your choice. He has them in stock or, if momentarily out of stock, can get them for you quickly from one of our six conveniently located warehouses.
- Try the samples in your prototype.
- If satisfactory in all respects, your distributor can get production quantities, bulk-packed, from STANCOR's inventory — AT OEM PRICES.
- Quantities of 100 to 499 will be quoted and invoiced by your STANCOR distributor but with drop-shipment to you from STANCOR. One shipment (no scheduling).
- Prices are F.O.B. CHICAGO **under $500** and F.O.B. DESTINATION **over $500.**
- Requirements of 500 pieces or more per item will be quoted via your STANCOR distributor but shipped and invoiced by STANCOR. Therefore your purchase order should be issued in the STANCOR NAME care of your STANCOR distributor who will relay it to us. This seemingly devious routing has been carefully planned to result in the fastest delivery and lowest cost to you.
- Quantities of 500-999 — one shipment.
- Quantities of 1,000 and over per type may be released in up to four increments of 25% each over a maximum of one year. Each release **prepaid if over $500,** otherwise **f.o.b. Chicago.**

*Orders for standard catalog items with modifications (as shown below) will be accepted in minimum quantities of 500 pieces for shipment at one time to one destination. The modifications are:

A. Variation of lead length of standard lead wire.

B. Omission of end bells and/or magnetic shielding—or addition of same if practical.

C. Variation of standard bracket locations; that is, horizontal versus vertical mounting.

D. Non-hermetic-sealed enclosure within standard catalog parts structure. (Omission of/or added to open transformers, where practical.)

E. Where customer part numbers and/or special marking are required or special gray painting is involved.

F. Center tap secondary converted to four isolated leads or terminals.

G. Omission of one or more taps in multi-tap winding. Additional taps cannot be added.

*TERMS ARE NET 30 DAYS.

GSD SERIES STEP-DOWN AUTO-TRANSFORMERS DESIGNED FOR SAFETY!

Featuring 3-Wire NEMA Standard Line Cords and Receptacles . . .

Available in 10 sizes to handle continuous duty power requirements from 75 VA. to 2 KVA., 230 volts 50/60 Hz. to 115 volts, single phase.

All units built in type "C" mounting style semi-shielded construction. Case and core are connected internally to third wire in line cord and output receptacle, to comply with modern safety standards.

SUB–MINIATURE TRANSISTOR AUDIO TRANSFORMERS

These high quality miniature transformers are high efficiency audio components featuring hermetic sealing for maximum protection against electrolysis and subsequent corrosion of fine wires caused by moisture penetration. The units are constructed in accordance with MIL-T-27 Specifications. Transistor transformers can also be supplied in an open or encapsulated type of construction.

MINIATURE AUDIO TRANSFORMERS

These high quality, miniature transformers feature hermetically sealed for maximum protection from moisture penetration with subsequent electrolysis and corrosion of fine wires. While primarily intended for non-military equipment, these units are constructed in accordance with MIL-T-27 Specifications.

Frequency response:
±2DB 30-20,000 Hz
* ±2DB 200-10,000 Hz
All units supplied in DM-20 cases

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

FREED TRANSFORMER CO., INC.

TRANSISTORIZED CONVERTERS—TDC LINE

For DC/DC conversion from low voltage DC sources to high voltage DC output. Stock units are available in power capabilities to 45 watts, with input voltages of 6, 12, 24, 28, and 48 volts.

All TDC converters are hermetically sealed and oil filled. Outputs are filtered with ripple less than .1%. Operating temperatures from −55°C to +70°C. They are ruggedly built to withstand shock and vibration.

DC TO AC TRANSISTOR INVERTERS—TAC LINE

115 volt outputs at 60 Hz at powers ranging from 50 VA to 350 VA.

Output wave form-square wave; Output frequency – 60 Hz ±1 Hz;

Hermetically sealed-oil filled; Maximum operating temperature – 70°C.

AVAILABLE TYPES:

CAT. #	NOM. VDC IN	OUTPUT VA	SIZE
TAC 6-50	6	50	4⅛ x 3½ x 4½
TAC 12-50	12	50	4⅛ x 3½ x 4½

TAC 28-250	28	250	5½ x 5 x 6¾
TAC 28-350	28	350	5½ x 5 x 6¾
TAC converters are also available with 400 Hz outputs in three models:			
TAC 12-100-4	12	100	4½ x 3½ x 4½
TAC 28-150-4	28	150	4⅛ x 3½ x 4½
TAC 28-250-4	28	250	5 x 4⅛ x 6

DC TO AC TRANSISTOR INVERTERS—PTC LINE

A new line of DC/AC inverters for operation from a 12 volt D.C. source. Output is square wave, 115 volts RMS at 60 Hz. Regulated to ±2 Hz over an input voltage range of 10.5 to 13.5 VDC.

Efficiency on all units is 80% min. at full load. Ambient temperature to 55°C.

Available models listed below:

CAT. #	VA OUT	SIZE	MTG.
PTC 12-15	15	3 x 2½ x 4	1⁹⁄₁₆ x 1¹³⁄₁₆
PTC 12-50	50	3½ x 3 x 4¹³⁄₁₆	2 x 2¾
PTC 12-100	100	5⅞ x 4 x 5¼ HI	3¼ x 3⅛
PTC 12-175	175	7⅝ x 4¹³⁄₁₆ x 5¼ HI	6 x 3½

PTC 12-15 and PTC 12-50 are supplied with 4-terminal headers for input and output connections.

PTC 12-100 and PTC 12-175 use barrier strip terminals and in addition have an auxiliary output receptacle.

DC TO AC TRANSISTOR INVERTERS — VC LINE

A low priced efficient transistor inverter for applications not requiring frequency regulation closer than ±5 Hz is available in 15 VA and 100 VA output capabilities. Input nominal 12 V.D.C. Output square wave 115 volt.

Cat. #	Power	Freq.	Size
VC 12-15	15 watt	55-65 Hz	3 x 3⅛ x 3¾ Hi.
VC 12-100	100 watt	55-65 Hz	4½ x 3½ x 4½ Hi.

MCV – CONSTANT VOLTAGE TRANSFORMERS – MCV

The MCV line of constant voltage transformers provides accurate regulation against line and/or load variations, without the use of tubes or moving parts.

Input Voltage Range 95 to 130

Rated output within ± 2% of nominal value. Regulation automatically maintained within ± 1% Regulation from 25% to full load ± 2%

HERMETICALLY SEALED MINIATURE AND SUB-MINIATURE FILTERS TO MIL-F-18327

Freed Standard Filters are **Hermetically Sealed Miniature and Sub-Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency • **ILP-ILM Interstage Low Pass Filter.** Characteristic impedance 10,000 ohms, in and out • **LLP-LLM Line Low Pass Filter.** Characteristic Impedance 500 to 600 ohms, in and out • **High Pass Filters:** The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency • **IHP-IHM Interstage High Pass Filter.** Characteristic Impedance 10,000 ohms, in and out. • **LHP-LHM Line High Pass Filter.** Characteristic Impedance 500 to 600 ohms, in and out • **Band Pass Filters:** The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency • **IBP-IBM Interstage Band Pass Filter.** Normal input impedance — 10,000 ohms. Output impedance .5 megohms. Effective voltage step-up 2:1. (Output voltage to source voltage.) • **LBP-LBM Line Band Pass Filter.** Nominal input impedance 500 to 600 ohms. Output impedance .5 megohms. Effective voltage step-up 5:1. (Output voltage to source voltage.)

Special filters in all six types are available upon request.

NULL "T" FILTERS SERIES 1950

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed. Prices on request.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A(graded 1 or 4 and 2 or 5 respectively.)Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

- SF Non-stabilized cores, ±2½% inductance variations from —55°C to +85°C.
- SN Non-stabilized cores, +2% inductance variations from —55°C to +85°C.
- SE Temperature stabilized cores, +0.1% to —0.4% inductance variations from —1.5°C to +54°C.
- SB Temperature stabilized cores, ±0.1% inductance variations from +13°C to +35°C.
- SD Temperature stabilized cores, ±0.1% inductance variations from —1.5°C to +54°C.
- SW Temperature stabilized cores, ±0.25% inductance variations from —54°C to +85°C.
- SM Temperature stabilized cores, ±.25% —65°C to +125°C.
- SP Temperature stable carbonyl iron cores, ±0.3% inductance variations from —55°C to +85°C.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

*TI-20 through TI-23 have a very low voltage coefficient and inductance will change very little with voltage. Because of high frequency application, the maximum voltage is limited rather by breakdown than by saturation.

Normalized $V_{AC} = \frac{V}{F} \frac{1}{\sqrt{L_H}}$

Normalized $I_{AC} = I_{AC} \sqrt{L_H}$

Normalized $I_{DC} = I_{DC} \sqrt{L_H}$

where F —operating frequency in Hz
L_H —inductance in henries
Iac—A.C. current in MA
Idc—D.C. current in MA
V —A.C. voltage across the core

QGC–HIGH "Q" REACTORS

QGC—are hermetically sealed, MIL-T-27, Grade 4, Class R, High Q Reactors for low audio frequency application with an excellent inductance stability with variations of A.C. and D.C. currents, frequencies and temperatures.

SPECIAL REACTORS:
(1) with a center tap
(2) with a split winding
(3) with inductances other than those listed can be supplied.

FREED TRANSFORMER CO., INC.

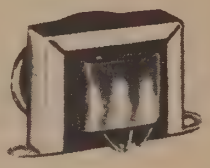
COMMERCIAL GRADE COMPONENTS

These components are designed to meet the demand for low-cost replacement parts for commercial electronic equipment.

The best commercially available materials have been utilized in the design of these units, to insure reliability and excellent performance characteristics. Vacuum impregnation with a non-hygroscopic varnish to prevent penetration of humidity are employed to give these units long life and trouble-free performance.

230-115 V, 50-60 C.P.S. Stepdown Transformers rated from 25 V A up to 5,000 V A Rating and line booster transformers are included in this series.



All units, with only a few exceptions, are uncased or of shell-type construction.

Isolation transformers and Stepdown transformers are equipped with line cord and receptacle.

TERMINAL ENCLOSURE KITS

Economical modification kits convert exposed-terminal models to enclosed ones. To order determine frame size and number of cores of selected transformer, determine appropriate Terminal Kit Model Number based on frame size from table at right, and order for each transformer the same quantity of Terminal Kits as there are cores.

For Frame Size	Model No.	Sugg'd Net Price[2]

[1] Also overvoltage connection amp. When overvoltage connection is used, rated current should not be exceeded. Output kva for overvoltage connection is maximum output voltage times rated current.

[2] OEM quantity prices are available on request.

[3] Output at overvoltage connection is 0.264 volts or 0-132 volts.

[4] No overvoltage protection provided.

[5] When using extended tap connections, operation is for 60 hertz only.

[6] 60 hertz only.

[7] When operated with this input voltage, rated current must be reduced when output voltage exceeds 140 percent of input voltage.

[8] For 240-volt input, 0-240-volt output, application only.

[9] For 480-volt input, 0-480-volt output application only.

GOTHAM

BEYER TRANSFORMERS
MINIATURE AUDIO

The BEYER line of miniature audio transformers distributed by GOTHAM represents over 30 years of experience in the field on the part of one of Europe's largest quality microphone manufacturers. It is for this reason that we make only one type of transformer in two sizes: A low level audio transformer suitable for microphones, tape playback heads, etc.

A special winding process permits these transformers to be made in this miniature size while maintaining studio quality frequency response, distortion, and level capability. The coil is wound on a continuous laminated core which means the elimination of the split core with its inherent losses. Result is a semi-toroidal construction with its superior resistance to hum induction.

BEYER transformers are used in professional audio equipment by such outstanding manufacturers as Ampex, Bauer, Collins, Precision Instrument, Rust, and many others. All transformers are made to special order to O.E.M. users' specifications. Samples can be supplied within 2 weeks, production usually within 4 weeks.

FOUR PHYSICAL MOUNTINGS ARE AVAILABLE:

Threaded Stud: The Model TR-45 Commercial Quality and TR-145 Studio Quality units are offered in mu-metal housing with threaded stud supplied with two nuts.

Solder Lug: The Model TR-45L and TR-145L are same as above but have radial lugs each end of housing to permit terminal board or Vector socket mounting. Also available in sub-miniature TR-710 Model (see fig.). Primary and secondary windings brought out opposite ends of mu-metal can.

Plug-in: The Model BV-36 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing with 7-pin miniature plug base. Same mu-metal shielding.

Printed Circuit: The Model BV-37 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing only 1.09" high with special 7-pin, 8-pin, or 9-pin printed circuit base.

ELECTRICAL CHARACTERISTICS:

Transformers are supplied with any turns ratio from 1:1 to 1:150, tapped and split windings, static shielding, high voltage test, vacuum impregnating or other requirements.

TYPICAL TRANSFORMER SPECIFICATIONS:
Model TR-145/BV35570 (This Model stocked)

Turns ratio	1:15 ±10%
Impedance ratio	200/45,000 Ohms nominal
Frequency response	±0.2 dB 20 - 20,000 cps.
Maximum input level at 1% THD	370 mV at 30 cps.
Primary open circuit inductance (50 cps)	6.0 H
Primary open circuit impedance (50 cps)	1000 Ohms
Primary DC resistance	70 Ohms
Secondary DC resistance	10,000 Ohms
Hum shielding (EIA std.)	>70 dB.

A NEW GENERATION OF FLUTTER METERS AND ANALYZERS

ME 102B FLUTTER METER

PRICE: $480.00 from stock in N.Y.

- ±0.01 to 1% flutter range
- ±2% deviation (drift) range
- Measures either 3kHz or 3.15 kHz
- Level threshold relay prevents indication error
- Self contained oscillator
- Self calibrating ● Solid state
- Freq. deviation meter (drift)
- Weighted & unweighted measurements
- International standard (CCIR/DIN)
- Oscilloscope outputs
- No level adjustment needed

ME 104 FLUTTER METER

PRICE: $375.00 from stock in N.Y.

- ±0.02 to 3% flutter range
- ±4% deviation (drift) range
- Measures at 3.15 kHz only
- Self contained oscillator
- Self calibrating ● Solid state
- Freq. deviation meter (drift)
- Weighted & unweighted measurements
- International standard (CCIR/DIN)
- Oscilloscope outputs
- No level adjustment needed

ME 301 WAVE ANALYZER

PRICE: $795.00 from stock in N.Y.

- Continuous sweep notch filter
- 1 Hz to 330 Hz in 5 ranges
- 40 dB/octave filter slope
- 10% (3 dB points) band width
- Zero loss ● Solid state
- Interconnects to ME-102b and ME-104

RECTIFIER TRANSFORMERS

Transformers are with 2 — 18 volt center-tapped windings. Connected in series delivers 36 volts as rated. Connected in parallel — delivers 18 volts at twice rated current. (Taps 9, 18, 27, 36 V.)

Primary taps at 100, 105, 110 and 115 volts available on 12 amp, 24 amp, 30 amp and 50 amp transformers. No extra charge.

OHMITE variable transformers

OHMITRAN v.t.® VARIABLE TRANSFORMER

Unique for the design innovations they incorporate, Ohmite "OHMITRAN" v.t.® variable transformers include exclusive field-proven features. They offer long, low maintenance operation with excellent regulation at any voltage setting within the rated load plus an output free of waveform distortion. Six frame sizes offer a wide range of electrical ratings to meet most industrial applications. These include three new, compact, low-power models (VT1, VT02, VT3,) which permit a fine choice of six ratings from 1 to 3 amperes.

The VT1, rated 1 ampere, is the smallest commercial variable transformer available.

UL LISTING: A number of VT4, VT8 and VT20 transformers used for 120 volt line operation are underwriters' laboratories listed. See tables, page 26 for details.

POSITIVE CURRENT TRANSFER . . . achieved with specially designed brushes connected through high conductivity contact arms or pigtails to a large slip ring which contacts a wide area of the collector ring. The brush contact assembly on the VT1, VT02, and VT3 is instantly replaceable, when necessary, as a result of a slide-on, snap-in design. Brushes of the other models are easily replaced also.

ADJUSTABLE SHAFT: On all Ohmite transformers, except the VT2LN, the shaft may be extended out from either the brush or opposite side as desired. On the VT1, VT02 and VT3, both single and tandem assemblies, this is an **exclusive** Ohmite feature which affords greater versatility of mounting and application. For example, substitution of a longer shaft or extension of the standard shaft allows actuation of other devices, such as switches or potentiometers without special construction. The shaft is freed simply by loosening set screw in the hub assembly. A double flat on the shaft permits two knob positions.

On the VT4, VT8, and VT20 types, the adjustable shaft feature permits **table or panel use.** "Ganged" or tandem VT4, VT8 and VT20 units employ a thru-shaft offering the same flexibility. On VT4 and VT8 units, shafts are fixed in the desired position by means of socket head screws located in the hub of each "brush-radiator" plate. The VT20 employs a unique collet-type shaft lock.

INTERCHANGEABLE WITH OTHER POPULAR TYPES: Basic "v.t." units have mounting provisions which match those of virtually all popular transformers of comparable current rating. Models VT4, VT8 and VT20 mount by means of bolts. Normally 3-hole mounting, single VT4 units can be "4-hole mounted" by means of adapter plate, see page 35. Individual Model VT1, VT02, VT2LN, or VT3 units mount by means of a standard ⅜-32 threaded bushing. All tandem assemblies mount by means of bolts or nuts. Knob, dial and mounting hardware are included with each transformer.

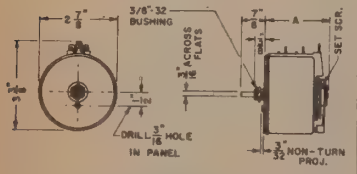
DIRECT READING, TWO SCALE DIAL . . . calibrated on one side for overvoltage connection; on the reverse side for line voltage connection. Dials normally included with transformer read clockwise for increasing voltage; counter-clockwise calibration available—see page 35.

WIRING AND CONNECTIONS: Wiring instructions to arrange various modes of operation are enclosed with all OHMITE variable transformers. Terminal panels or adjacent nameplate carry convenient wiring diagram, coded terminals and input and output data. Three way terminals on VT1, VT2LN, VT02, VT3 will accept ¼" push-on connectors, screws and nuts, or conventional soldering.

ROTATION OPTION: On VT4, VT8 and VT20 transformers connected for overvoltage, either clockwise or counter-clockwise increase of voltage can be arranged easily by the user. Increasing voltage in either direction can be arranged on all units connected for no-overvoltage output. Dials for counter-clockwise operation are stocked. See "Accessories."

OVERVOLTAGE OPTION: On all transformers with overvoltage feature, no-overvoltage operation can be arranged on the terminal panel.

NO-OVERVOLTAGE TRANSFORMERS ("N" suffix): Provide considerably more current due to heavier gage winding.



240-VOLT INPUT ("H" suffix): On units which are wound for 240-volt input, a 120 volt input tap is also provided. With the use of this input, the maximum current rating applies up to 120 volts output but beyond this reduces proportionately to approximately 50% at maximum voltage output.

LOW VOLTAGE INPUT ("L" feature): Designed for a maximum input of approximately 40 volts, with high current output.

GROUNDED INPUT & OUTPUT ("C" feature): Units in type F or G cases can be provided with a three-conductor cord and outlet. One conductor is grounded to the case. This feature standard on all cased VT20 units and on all metered units.

OHMITE variable transformers

ENCLOSED OR CASED UNITS: In gray hammer tone finish. "Basic protective enclosures" (Type B) expose the transformer's terminal panel and mounting base and are supplied presently on VT20 models only. (See tandems in "B" enclosures below.) "Fixed mounting enclosures" (Type E) are intended for permanent mounting on table, panel or inconduit-line. Standard portable units (Type F) carry a line cord, outlet socket, and fuse except for VT20F which has a circuit breaker. Deluxe portable units (Type G) utilize a circuit breaker, can be switched to overvoltage or no-overvoltage as desired, have a handle which also serves as an easel.

METERED ENCLOSURES: VT8NFC, VT8GC, VT20NFC and VT20GC transformers are available with voltmeter (V), voltmeter and ammeter (A) or voltmeter and wattmeter (W). The metered transformer enclosures are larger than the non-metered types of comparable designation, (see dimensions below). All stock metered units have the three-conductor grounded cord and outlet and all, except the VT8NF group, are equipped with carrying handles.

Footnotes for Stock Table

[1] Frequency shown is a minimum — units may be used up to 1000 cps.

[2] VT8H and VT20H and 240V output for VT8HN and VT20HN. With use of 120V input VT8H, VT8HN, VT20H, VT20HN also have taps for 120V input with 280V output for the max. current rating applies up to 120V output but reduces to approx. 50% at max. output voltage. In the case of tandem units, use of the low voltage inputs would correspondingly derate the current at the higher output voltages.

[3] Connected at factory for overvoltage output — easily reconnected by user for no-overvoltage output. On VT8G and VT20G, switch selects overvoltage or no-overvoltage.

[4] User wires for desired output. Dial normally calibrated for overvoltage.

[5] 2-in-tandem normally wired for series connection; 3-in-tandem for Y connection.

[6] When transformers are series connected, load cannot be grounded.

[7] Includes knob, dial and mounting hardware.

[8] May be used at 50 Hz if connected for no-overvoltage output.

[9] Overvoltage connection must not be used.

[10] 240/280 volt cw dial standard except on VT1, VT02 and VT3 tandems where 240/264 volt dial is standard or on VT8H-2, VT8HN-2, VT8H-3, VT20H-2, VT20HN-2, VT20H-3 and VT20HN-3 where 480/560 volt dial is standard. Request other dials if desired — see "Dials" above.

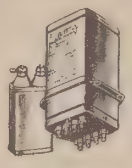
DIVISION OF SOLA BASIC INDUSTRIES

CV Transformers

Constant-voltage Sola transformers provide a stabilized output voltage even though the input voltage varies over a considerable range. Their applications are numerous and varied. CV's are especially ideal for high-accuracy requirements such as in computers and data-processing equipment.



Another advantage in CV transformers is their ability to prolong the life of electronic components by eliminating injurious over- and under-voltages. The Sola transformer's current-limiting factor protects semi-conductors and other components from excessive inrush and fault currents.

Write for catalog CV-100 for complete listings including 50 and 400 Hz models.

Electronic-Power Types ±1% REGULATION FOR FILAMENT TYPE, ±3% FOR PLATE-FILAMENT TYPE

The electronic-power type of Sola transformer is designed as a component for simple assembly into many kinds of electronic equipment. The filament type (CVF) provides 6.0 or 6.3 volts of output regulated within ± 1% over line variations of ± 15%; the combination plate-and-filament type (CVE) regulates within ± 3%.

D — Drawn case; integral capacitor unit; flex leads.

E — Exposed core; end bells; separate capacitor; flex leads.

PARALLEL CONNECTED SECONDARIES

SERIES CONNECTED SECONDARIES

All transformers are designed conservatively for a max of 45°C rise above ambient, for use on 115V power line from 50-500 cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers and chokes are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings.

HIGH & LOW CURRENT CHOKES 0.1 to 1000 AMPS

OPEN FRAME • EPOXY ENCAPSULATED (GRADE 5) • HERMETICALLY SEALED (GRADE 4)

Signal's line of High and Low Current Chokes is the most extensive available. It is designed to complement the selection of High and Low Current Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values.

Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

Signal's Dual Chokes are supplied with 2 windings which may be series or parallel connected with rating shown on chart. This line is basically designed for applications requiring lower inductance values at high currents, such as low voltage DC supplies or SCR filters.

As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.

WINDINGS OF HEAVY COPPER STRIP

STRIP-WOUND SECONDARIES

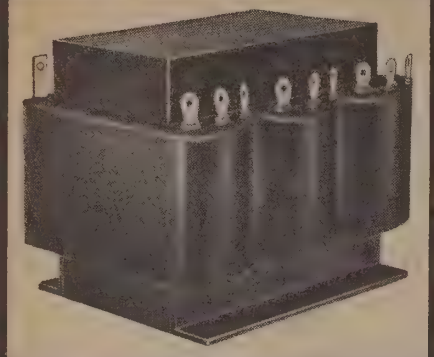
At the heavy current used in this line it becomes practical and desirable to use wide copper strip (as wide as the coil itself) for windings. Besides the obvious advantages of excellent winding space factor, the heat dissipation of the coil is improved. This improvement is due to the fact that the heat generated in the windings has a pure copper path to the coil ends, where it can be dissipated. In conventional windings of many turns per layer this heat flow is impeded by wire insulation and air spaces between turns. Therefore, the use of copper strip windings yields a dramatic reduction in size and weight.

GRAIN-ORIENTED STEEL CORE

These cores permit the use of higher peak flux densities for the same core loss. This results in a lower number of turns required and therefore, a smaller, more compact transformer.

CLASS F INSULATION USED THROUGHOUT

Class F insulation is rated for unlimited life at a total temperature of 155°C (ambient plus temperature rise).



Class A insulation has a maximum temperature rating of 105°C. The "nominal" current ratings given to this series are for a temperature rise of 45°C above 55°C ambient (Class A). Since Class F insulation is used it is permissible to increase these ratings by 40% (700 and 1400 amperes) without reducing the reliability of the transformer. The temperature rise will be 100°C over a 55°C ambient. The only limitation is not the transformer, but the temperature rating of surrounding components which may be affected by the additional heat radiated by the transformer

At higher power loads (above 2·3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines These offer the significantly higher conversion efficiency and lighter power line drain of 3 phase systems.

Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

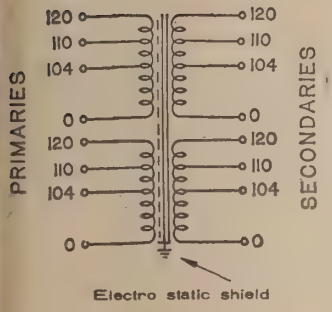
POWER ISOLATION OR AUTO-TRANSFORMERS
HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS

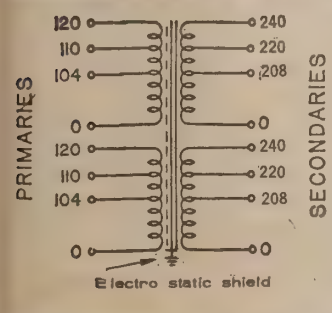


AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU", "SU", and "UP" lines are designed for a maximum of 55°C rise above ambient for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers (10-32 on ¼ and ½ KVA, ¼-20 on larger sizes). Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings. **Electro static shields are provided grounded to the core.** The connection is made with a lug to ground and may be opened if an ungrounded shield is desired.

"DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec. (Primary & Secondary may be reversed)



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is **doubled.**

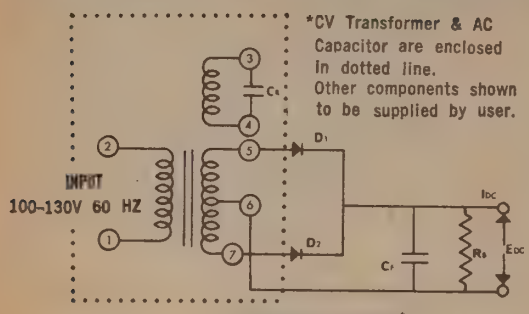
"UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec. (Primary & Secondary may be reversed)

The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts.



This type is quite useful to boost low line voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

CONSTANT VOLTAGE TRANSFORMERS

FOR USE IN DC POWER SUPPLIES (TYPE CDC)

SCHEMATIC DIAGRAM *

CDC CONSTANT VOLTAGE TRANSFORMERS

Signal's CDC Regulating Transformers are specifically manufactured fo use in DC Power Supplies. They are designed and rated for use with a ful wave center-tapped silicon rectifier. CDC transformers are operated i ferro-resonance and are used in conjunction with an AC **tuning capacito** (Cr in schematic diagram), which is supplied with the transformer.

In order to construct a regulated power supply the only other part necessary are two diodes (D_1 and D_2), an electrolytic computer grade capaci tor (C_f) and a bleeder resistor (R_b). These are standard shelf items.

The specification chart lists specific outputs available and the recom mended auxiliary components. Part numbers are coded in terms of DC outputs, e.g., CDC-15-2 will give an output of 15V DC at 2 amps DC.

Electrical performance is completely specified. The DC voltage is constan to ±1% over the line voltage range of 100 to 130V at 60 HZ. The nomina output is held to ±2%. Closer tolerance on nominal output (±1%) can b obtained on special order at slightly higher cost.

Load regulation is specified as the rise in dc voltage output (increase in E_{dc}) from full load to the no load, ¼ load, and ½ load points. The filter capacitor (C_f) specified should be used and will yield the values of ripple voltage shown.

A significant protection feature is the fact that the DC short circuit current is limited to a maximum of 2 times rated current (3 times in size "C-6" units). This protects the entire circuit against shorts.

CONSTANT VOLTAGE TRANSFORMERS
FOR USE IN AC APPLICATIONS (TYPE ACV)

Signal ACV transformers are manufactured for use with AC loads. They are simple and rugged designs and will regulate to within plus or minus 1% for input variations from 95-130V at 60 cps. If regulation of plus or minus ½% or better is desired, special units can be made to your order. Nominal output at full load is held to a tolerance of ±2%.

Full regulation is maintained at any load from about 20% to 100%. Overload current is limited to a maximum of 200% of rated current at short circuit. The 6.4 and 12.8V ratings are ideal for use with tube or lamp loads since the short circuit current rating limits the inrush current to cold filaments. Stabilization of the voltage results in longer filament life.

ACV transformers are "normal" harmonic type with approximately a square wave output.

ADVANTAGES OF CONSTANT VOLTAGE TRANSFORMERS

REGULATION — output regulated to plus or minus 1% for line voltage variations of 95 to 130V at 60 cps.

SELF-PROTECTION — against output short circuit. Current limited to a maximum of 2 times rated current.

MECHANICALLY RUGGED — as resistant to mechanical shock as conventional power transformers.

NO MOVING PARTS — no adjustment or maintenance necessary.

SQUARE WAVE OUTPUT — ideal for use in rectifier circuits — little filtering needed.

HIGH DEGREE OF ISOLATION — between input and output circuits — both physical and electrical isolation, electro-static shields not necessary.

RESONATING CAPACITOR — supplied with transformers.

EPOXY IMPREGNATION — minimizes acoustic noise.

Signal's PC Transformers are constructed of prime raw materials using Class insulation and nylon bobbins with PC pins molded directly in the bobbin wall. They ar black varnish impregnated and 100% tested for all parameters before shipment.

Primaries are rated at 115 V. 50 to 500 Hz. Dual secondaries provide two outputs or secondaries may be series or parallel connected. This results in a wide variety o output combinations. Load regulation is limited to a maximum of 20%.

DUAL INDUCTORS FOR SMOOTHING & SCR SURGE LIMITING

"PCC" dual filter chokes find use in DC supply filters or as inductive elements in switching circuits. Another application is to limit current surge (di/dt) in SCR circuits. These chokes may also be used as AC reactors.

SPECIAL "PC" COMPONENTS

Signal maintains a unique department which specializes in the design and production of "PC" type transformers and chokes. It is equipped with the most modern automated coil winding and lamination stacking machinery. Specialized production test equipment assures uniform, high quality transformers at the most economical price. This facility is being constantly improved and expanded to meet the growing demand for our designs.

The "PC" items shown here are stocked in depth at our factory for immediate delivery. However, they represent only a small fraction of our total shipments. The major portion consists of custom designs or variations for our customer's special requirements.

Please contact us for prompt quotations on any of your special requirements for "PC" or other bobbin wound components.

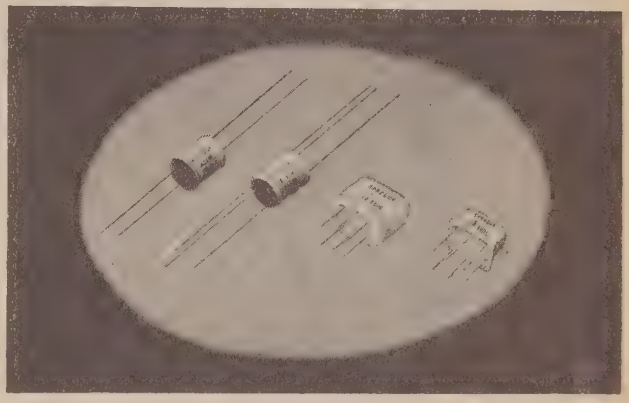
SPRAGUE PULSE TRANSFORMERS



Type 11Z

TRIGATE® PULSE TRANSFORMERS

FLEXIBLE LEAD AND PRINTED WIRING BOARD DESIGNS FOR LOW-COST SCR CIRCUIT APPLICATIONS

- Specifically Designed For Commercial and Industrial SCR Triggering Applications Where Low Cost and Excellent Performance Are Required
- Single-ended Pulse Transformers Are Designed With Leads Especially Intended For Mounting On Printed Wiring Boards; These Units are Self Supporting
- Balanced Pulse Characteristics and Energy Transfer Between Windings
- Minimum Saturation Effect To Allow Operation Where Increased Pulse Widths Are Required
- Fast Pulse Rise Time and Increased Current Capability To Prevent SCR di/dt Failure
- Operating Temperature Range of −10 C to +70 C
- For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin 40003

STERLING TRANSFORMER

UNIVERSAL DC POWER MODULE TRANSFORMERS

High reliability transformers having a tapped primary and single or dual secondary windings which may be connected F.W. bridge or F.W. center tap so as to obtain a wide range of DC voltages and current ratings.

120 VOLT VARIABLE ISOLATION TRANSFORMERS

STACO isolated variable autotransformers provide a means for smooth control of an electrically isolated AC voltage output. Uncased models offer isolated, non-isolated voltage doubler, and series connections with proper external hook-up. Cased models feature circuit breaker, switch pilot light, output voltmeter 3 wire grounded cord, plug, and matching receptacles. Cased models available in isolated connection only. Ratings shown are for isolated connections.

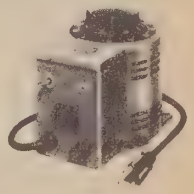
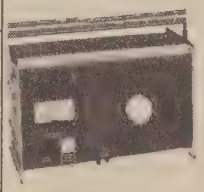
DELUXE VARIABLE AUTOTRANSFORMERS





STACO offers a selected group of variable autotransformers with new style, broad applications, and a unique combination of practical features. Suitable for use in any industrial application, classroom or laboratory. All units provide continuous voltage control over a wide range, and all are protected against short circuit. Convenient controls provide error-free operation and distortionless adjustment of AC voltage.

STACO Variable Autotransformers

STACO Variable Autotransformers are precision built to exacting tolerances from the finest materials available.

Staco's new improved design provides long life with negligible maintenance, high efficiency and regulation, greater power to size ratio. Staco designs permit replacement of competitive equipment or previous Staco models without modification.

Models are available in various configurations from 1.75 to 300 amperes output. Choose from panel mounted units, cord and plug types or deluxe fully enclosed portable models, with or without metering. Staco products represent 25 years experience in providing safe and dependable control of power.

STACO INCORPORATED

POWERSTAT® Variable Transformers now

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

ADJUSTABLE SPEED DRIVES

All motor-driven units in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 Series are available with adjustable speed drives which permit the output voltage of the transformer to be controlled over the full range of zero to maximum output voltage at speeds ranging from 5 seconds to 200 seconds. All control circuitry is solid-state and adaptable for present speed systems. The Adjustable Speed Control Potentiometer BHP65455-G1 can be remotely located from the variable transformer.

OIL-COOLED AND EXPLOSION-PROOF

Oil-cooled units substantially increase ratings above equivalent air-cooled types and provide a measure of safety. Explosion-proof models are Underwriters' Laboratories listed for Class 1, Group D service. Both are manually operated only.

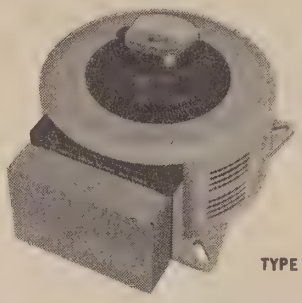
STATIONARY METERED KNOB POWERSTAT® Variable Transformers



- FOR BACK-OF-PANEL OR GENERAL UTILITY MOUNTING

GENERAL UTILITY MOUNTING – Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with knobs incorporating direct-reading voltmeters. Voltmeters remain stationary as the knob rim is turned, have an accuracy of ±3% of full scale and are insensitive to stray magnetic fields. When ordering, add VS prefix to the type number given in the charts.

BACK-OF-PANEL MOUNTING – Standard cataloged POWERSTAT Variable Transformers in the 21-22 through the 146-246 series designed or adaptable for back-of-panel mounting can be combined with Metered Knob Assemblies. Models for 120 volt service require Metered Knob Assembly VS150 having a 0-150 volt scale and units for 240 volt use require Metered Knob Assembly VS300 having a 0-300 volt scale. Existing models can be retrofitted also.

ENCLOSED LABORATORY POWERSTAT® Variable Transformers

Portable, single phase units having grounded NEMA cord-plug assembly, on-off switch, output receptacle, pilot light and fuse. The handle is integrally designed and the panel controls are recessed. A slot is provided at the rear of each unit to accept wall hanger brackets supplied with the assembly. Types N21, N116B, N116BK, N116BL and N116BLK have POWERKOTE Coils.

METERED KNOB types N116BK and N116BLK have metered knobs to conveniently measure load voltage without the necessity of providing a separate voltmeter. The knob is designed so that the voltmeter remains stationary as the knob is turned to vary the voltage, assuring accurate readings and maximum meter visibility.

Triad J Series offers flexibility enabling your amplifiers to exceed broadcast standards. Although economy in construction has cut costs, these transformers approach and closely approximate performance characteristics found in more costly hermetically sealed parts. Single hole mounting provides for rotation for maximum reduction of hum . . . alloy shielding gives you 40-60 db hum reduction (60-80 db in Types A-11J & A-12J) . . . you can obtain wide frequency ranges . . . flexible leads facilitate ease in mounting . . . input units are electrostatically and magnetically shielded . . . light weight and encased in Triad's satin smooth baked gray enamel cases, 1 3/8" diameter, 1 3/4" above chassis . . . legible circuit diagrams are permanently affixed to every case.

CHOPPER INPUT TRANSFORMERS

Triad Chopper Input Transformers provide exceedingly close balance between the two halves of the primary winding . . . minimum noise in microvolt ranges of input signals is assured with Triad's special core treatment techniques. For demanding transistor and tube applications, Triad's special design capabilities have an outstanding record. For special applications, consult Triad.

TOROIDS

Triad toroids may be ordered with standard leads in strong plastic coating, or epoxy molded encapsulated per Specification MIL-T-27A; TF5RX20ZZ. To specify molded toroids with gold-plated fixed terminals, an "A" should be added to the full type number; for example, EM-001A.

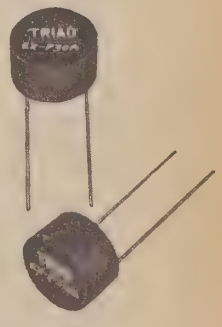
Sub-miniature Encapsulated TOROIDAL INDUCTORS

Triad sub-miniature toroidal inductors, designed for quick, easy printed-circuit board mounting, are now stocked for immediate delivery in a range of standard ratings from 50 micro-henries to 400 milli-henries. Many uses, especially in airborne telemetering applications incorporating Triad's sub-miniature filters FL-384 through FL-388. Case size of units is 7/16 inch diameter by 1/4 inch high. Providing an optimum combination of high Q and extremely small-size, this series is ideal for printed board, transistor or vacuum tube application.

Triad sub-miniature inductors are toroidally wound on permalloy powdered cores. Encapsulated in high temperature epoxy resin. Weldable or solderable leads of gold plated nickel alloy. Highly resistant to severe acceleration, shock or vibration. Manufactured to MIL-T-27B, Grade 5 Class S (MIL type TF5SX20ZZ).



NOTE: Ma. DC maximum is for approximately 5% drop in inductance. Those figures marked * will give less than 5% inductance drop but should not be exceeded under operating conditions.

Inductance tolerance of EX-P05A through EX-P60A is ±5%; EX-001A through EX-400A is ±2%.

Prices subject to change without notice. Net prices shown for 1-9 quantity. For 1 to 249 pieces, see your stocking Triad Distributor for quantity discount schedule. For 250 or more pieces, contact your Triad Representatives or call the factory.

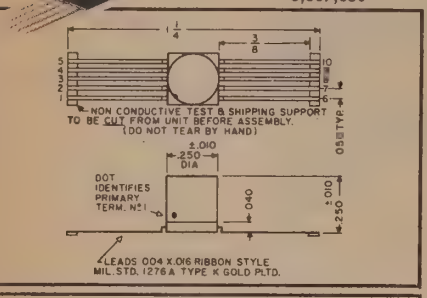
NEW ULTRAMINIATURE TRANSFORMERS & HIGH Q COILS



See UTC High Q Coils in inductor section 1800 and Electronic Wave Filters in filter section 2700.

BIT-250* A COMPLETELY NEW DEVELOPMENT IN TRANSFORMER TECHNOLOGY

WEIGHT 1.1 GM.

U.S. Pat. No. 3,507,039

NOTES

- Frequency response: ±2 db, 300 Hz — 250,000 Hz @ 1 MW Ref. level
- Dielectric strength tested @ 200V RMS
- Designed and tested to full MIL-T-27C environmental requirements
- MIL Grade 4, metal-encased, ruggedized
- Lead Material: Gold-plated ribbon-style Kovar, solderable and weldable — MIL-STD 1276A Type K

PACKAGING

Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

RELIABILITY

Cylindrical bobbin-winding techniques eliminate corner stress normally found in fine-wire windings of conventional rectangular structures.

Lead arrangements and terminations have been designed to maximum reliability under thermal shock and temperature cycling.

FLEXIBILITY

These units are designed to afford maximum flexibility of application.

Transformers are 7-terminal types, with center-tapped primaries and split secondaries. When connected in parallel, split-winding secondaries provide ¼ the impedance and twice the DC current capability as series connections.

Inductors in the stock line include both single-winding and split-winding types.

Leader may be bent for plug-in PC application.

AUDIO & POWER TRANSFORMERS AND MAG AMPS

DO-T200* SERIES, ULTRAMINIATURE PLUG-IN TRANSISTORS TRANSFORMERS

Manufactured and successfully tested to complete environmental requirements of MIL-T-27C. Most Ruggedized MIL Structure, Grade 4, Metal Encased. MIL types TF4RX13YY, TF4RX16YY. Immediate Delivery From Stock. Full Conformance to MIL Mounting Requirements. Solderable and Weldable Leads. Hermetically Sealed. Straight Pin Terminals. Excellent Response. High Efficiency. Low Distortion. Leads are ⅞" long, .016 Dumet wire, gold plated, and may be either welded or soldered. They are uninsulated and are spaced on a .1" radius circle. In pulse coupling impedance matching applications (when measured with a 30 microsecond input pulse voltage wave), typical values for these transformers are: 5% or less droop, zero overshoot, and less than 10% backswing. Also see **UTC page T-3 for other DO-T family constructions.**

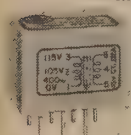
NEW LINE OF SOLID STATE "MAS"* PUSH-PULL MAGNETIC AMPLIFIERS

For other Magamps see UTC page T-7.



The "MAS" magamps operate on an input of 115 V 400 Hz with an output of ±7.5 V DC, 1000 ohm load and have 2 isolated control inputs. These magnetic amplifiers afford a **power gain of approximately 30,000.** The power input and output are also completely and individually isolated. The "MAS" magamps are manufactured to MIL-T-27C standards. Units are housed in a hermetically sealed steel case with plug-in octal compressed glass terminals. The "MAS" magamps are 3 inches high with a 1½ inch diameter and weighs approximately ½ pound.

The "MAS" magamps have many advantages over other active circuit elements such as tubes, transistors: • Long life and years of maintenance free operation due to magnetic characteristics and solid state elements. • Ruggedness can withstand high shock, vibration, radiation, and moisture. • Reliability — can withstand 10 times overloads and operate into short without damage.

Possible applications include: • Control Amplifier • Photocell • SCR Controls • Strain Gauge Amplifier • Meter Preamps • Thermocouple • Differential Amplifier • Signal mixing, summing, integration • Hydraulic Servo Valve Driver • Servo Motor • Linear Amplifications of Transducer Signals.

DI-T200* SERIES TRANSISTOR TRANSFORMERS

(ALSO SEE UTC PAGE T-2 FOR DO-T200)

These revolutionary transistor transformers embody the same rugged reliable construction afforded by the unique winding techniques and physical construction found in the DO-T & DI-T transformers. DI-T200 series differ by having straight pin, 1" long, .017 d. Dumet wire, gold plated leads. To MIL-T-27C, size 5/16 x 3/8", wt. 1/15 oz. U.S. Pat. No. 2,949,591

PRECISION SCOTT-T REFERENCE TRANSFORMER
NEW SRC-10*

Designed, Manufactured and Successfully Tested to Complete MIL-T-27C Specifications

Used in the precise conversion of three wire synchro information to equivalent resolver information. Two outputs 90° apart are obtained, which can be utilized in analog and digital computer application or coordinate transformation applications. Mil type TF4SX09AJ.

Special custom built units with other electrical values are available to your requirements

Input 90V 60/400 Hz 3 Phase high impedance suitable for synchro output.

Output 1) 3V @ .25 MA } 2 Phase Output.
2) 3V @ .25 MA }

a) Magnitudes of output voltage matched within 0.25%.
b) Phase angle of output voltages is 90° ± .225°.

PIP* SERIES TRANSISTOR PULSE TRANSFORMERS

UTC's PIP series of subminiature transistor type pulse transformers is designed to give a maximum of component density in equipments, their configuration being especially compatible with transistors. The design is based on the UTC DO-T and DI-T series to impart exceptional reliability. PIP-1 through PIP-9 have a ratio of 4:4:1, PIP-10 through PIP-12 have a ratio of 5:3:1. All units are checked and adjusted in a transistor test circuit to give the required pulse width.

Hermetically sealed, manufactured and guaranteed to MIL-T-20138B by full environmental testing . . . all units, completely METAL CASED, MIL type TP6RX4410CZ. See UTC pages T-1, T-7 for other miniature pulse transformers.

TRANSISTOR TRANSFORMERS

Designed, Manufactured and Successfully Tested to Complete MIL-T-27C Specifications.

TRANSISTOR SUPPLY TRANSFORMERS

Primary 115V. 50/60 Hz (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.CT.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding. All units MIL type TF4RX02.

MILITARY STANDARD TRANSFORMERS AND INDUCTORS

Designed, Manufactured and Successfully Tested to Complete MIL-T-27C Specifications

FILAMENT, POWER, PLATE TRANSFORMERS

Primary 105/115/125 v., 54/66 Hz. Current ratings are for high voltage secondary DC, choke input filter. For condenser input, reduce by 70%. All units are MIL grade 4, ruggedized; equally usable where grade 1 is specified. Electrostatically shielded.

HERMETIC SEALED POWER and PLATE TRANSFORMERS

H-114, H-115, H-117 have terminals opposite mounting.

Power transformers: primary 115V, 60 Hz suited to 50* - 1000 Hz service. Plate transformers: primary 105/115/210/220 volts, 50/60 cycles. "L" ratings are choke input . . . "C" ratings are condenser input. H-80 thru H-197 MIL type TF4RX03, H-110 thru H-117 MIL type TF4RX02. The tapped high voltage winding provides either of two secondary voltages for greatest versatility. The power transformer listings indicate DC voltages and permissible currents for both choke and condenser input filters, as well as for military and industrial applications.

"W" suffix units designed for full wave center tap and full wave bridge application. Center tap of secondary may be disconnected from ground.

MAT* MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

VACUUM TUBE TYPE

For NEW Magamps See UTC page T-2

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 Hz servo motors. They are compact . . . hermetically sealed . . . maanetically shielded . . . and meet MIL-T-27C and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 Hz, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 Hz with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the *Magnetic Structure* is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift.

ULTRASHIELDED POWER-LINE ISOLATION TRANSFORMERS

Simulates battery operation for critical circuits requiring extreme isolation from power line.

HIT*

Designed to give the ultimate in isolation, for line-powered equipment, which formerly could only be obtained from battery power. The effective capacity coupling between primary and secondary windings is less than 0.1 MMFD. For this purpose shields are individually terminated to allow maximum flexibility. Input and output terminals are brought out on opposite sides of a special housing in order to maintain the excellent isolation between line and load.

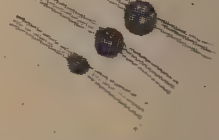
PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS MANUFACTURED & GUARANTEED TO COMPLETE MIL-T-21038B

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are high reliability units, hermetically sealed by vacuum molding and suited for service from −70° C. to +130° C. Wound core structure provides excellent temperature stability (unlike ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width. H-45 thru H-57 ratio 1:1:1. H-60 thru H-69 ratio 4:4:1. Others ratio 5:3:1.



Also see pulse units on UTC pages T-1 & T-3.

HIPERMALLOY* TRANSFORMERS

Hipermalloy audio and power transformers are specifically designed for portable and compact service. High fidelity though light in weight and dependable. The frequency characteristic of the Hipermalloy audio units is uniform from 30 to 20,000 Hz. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Primary shown is maximum unbalanced.

PLATE TRANSFORMERS

Primaries for 105, 115, 220, 230 volts; 50/60 Hz. For reduced power, secondary can be cut in half, using 220 v. primary on 110 volts; may be used on 25 to 43 Hz in this case. "W" suffix units designed for full wave center tap and full wave bridge application. Center tap may be disconnected from ground.

MINIATURE, OUNCER, SUBOUNCER & SUB-SUBOUNCER UNITS

SUBOUNCER*& SUB-SUBOUNCER*AUDIO TRANSFORMERS
TRANSISTOR & TUBE TYPES HERMETICALLY SEALED

Designed, Manufactured and Successfully Tested to complete MIL-T-27C Specifications.

UTC SSO-#P and SO-#P units are ideal miniaturized components having high efficiency and wide frequency response. Special nickel iron core materials and winding methods provide exceptional performance and reliability.

SO-#P UNIT Dim. ¾x1x2³⁄₃₂" Pin Length ¼" Wt. .....05 lb.

SSO-#P UNIT Dim. ¾x⅞x⁵⁄₁₆" Pin Length ¼" Wt. .....04 lb.

SML-70 ¹⁄₁₆x³⁄₁₆x⁵⁄₁₆" Wt. .2 oz.

These units are vacuum molded to MIL Grade 5. They employ 50 mil deeply anchored pin terminals ideally suited for printed circuit and transistor application. Terminals are strong enough to support these light weight units.

The UTC SML-70 is an ultra miniature transformer providing high shielding, extremely low insertion loss with wide band response, 200 Hz to 20 kHz. These units are provided with pin terminals (.025 dia.) strong enough to support the unit and are ideal for printed circuits.

AMATEUR & PUBLIC ADDRESS TRANSFORMERS "S"* SERIES

DIMENSIONS, SPECIAL SERIES TRANSFORMERS

G-1 thru G-4 G-5 thru G-12

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. These units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided, permitting above chassis or breadboard wiring in addition to standard chassis type.

PHOTOFLASH TRANSFORMERS

STANDARD 982

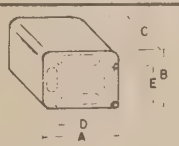
Can be used for either standard (Amglo type) or trigger (Sylvania type) multiple flash tubes. Circuit details included with transformer.

PF-1 Primary for 115 volts, 50/60 Hz. Secondaries for power supply delivering 2200 volts DC to condenser up to 100 Mfd. Compound sealed in G-3 (UTC page T-11) case 2⅛ x 2¾ (3¾ including flanges) x 2½ inches high. Wt. 2 lbs.

PF-3 Trigger Transformer 15 KV peak. ⅞ O.D.x3 long. Weight 2 oz.

PF-6

TRANSISTOR TYPE



These are miniaturized light weight units for transistor type photoflash supply.

PF-5 Primary for 115 volts, 50/60 Hz or for 4½ V. battery switched by PF-6 inverter transformer. Output delivers 400 V. DC when used in voltage doubler circuit to charge photoflash capacitor (typically 40 watt-Sec.). G-1 case (UTC page T-11)

PF-6 Inverter transformer transforms 4½ V. DC from battery to input for PF-5 stepup transformer. Ouncer case (UTC page T-11)

PF-7 Trigger transtormer. Shorting .25 mfd. capacitor (charged to approx. 225 V. DC) across terminals 1-2 produces 6 KV pulse at terminal 3 for triggering flash tube. ⅞" Dia. x 1⅝"; Wt. ½ oz.

LINE VOLTAGE ADJUSTERS WITH METERS (FIG. H SEE PG. T-11)

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage. These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly. The nine-tap switch provides for line voltage of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output model. All units are designed for 50/60 Hz service and come complete with 6 foot input cord and plug and outlet receptacle.

4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens horns, gongs, etc. from 115 V. 50/60 Hz line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

It is designed for use in VHF transmitter final amplifiers with transistorized drivers. It incorporates a unique new design called inverted construction which utilizes the center contact as the control grid contact. This innovation precludes the need for crossover wiring when the tube is to be used as a grounded cathode amplifier in a cavity type circuit.

THYRATRONS-HYDROGEN

TYPE NO.	PEAK FORWARD ANODE VOLTAGE MAX.	PEAK ANODE CURRENT MAX. (AMPS)	AVG. ANODE CURRENT MAX. (mA)	PULSE WIDTH MAX.	DESCRIPTION
6268/4C35	8,000	90	100	2 μsec.	These tubes are used as drivers for pulsing magnetrons and other oscillators and as high speed switches. Hydrogen-filled, they have extremely low deionization time. They are zero bias tubes, triggered by a positive grid pulse. Maximum pulse repetition frequency (prf in pulses per second) will depend on the peak forward anode voltage (epy in volts) according to formula: $(epy)^2 \times (prf) = 2.6 \times 10^{11}$ max.
6279/5C22	16,000	325	200	2 μsec.	Completely interchangeable with 5C22 in every respect except that it has self-contained source of hydrogen providing life expectancy of minimum 1000 hours.

Anode Voltage Range (V)	Starter-To-Cathode Breakdown Voltage (V)	Anode-To-Cathode Maintaining Voltage (V_M)	Anode-To-Cathode Breakdown Voltage (V)	Recommended Priming Resistor (Megohms)	Cathode Current Range (mA)	Peak Cathode Current (mA)	Typical DC Starter Current (μA)	Maximum Negative Starter Current (μA)	Maximum Ambient Temperature (°C)	DESCRIPTION
Z70U/7710	200-310	137-153	111-121	>325	18	2-4	16	20	150	70	Subminiature tube with priming cathode and positive starter voltage, for DC circuits. It may be used as an electronic switching element in counter circuits and in logic units. Other applications are in welding timers, touch controls.
Z70W/7709	200-310	137-153	111-121	>325	18	2-4	16	30	150	70	Subminiature tube with priming cathode and positive starter voltage for DC circuit.
Z71U/7711	125-165	73-90	54-68	>175	–	3-7[2]	12	40	100	70	Subminiature tube with two starters for counting and switching in DC circuit.
Z803U/6779	170-290	128-137	105	>290	10	25 (max.)	100	50	–	70	Stable trigger striking characteristic for position triggering.
Z805U/7714	250-450 dc 180-275 ac	137-155 dc 98-110 ac	118-128	>500	–	5-25	150	50	–	70	Miniature relay tube for ac circuits, short ignition delay and excellent high voltage properties.
Z900T/5823	140-200 dc 117 ac	73-105	62	>200	–	(25 max.)	100	100	–	70	Three electrode, gas filled relay tubes for "on-off" control of low-voltage apparatus.
ZC1040	250-350[1] 180-250[2]	120-240[1] 85-100[2]	112	350[1] 250[2]	10	15-25[1] 10-40[2]	25 40	200	200	+70°C +2°C/mA	Gas filled cold cathode trigger tube with molybdenum cathode and electrical priming. It has been designed to be ignited with positive voltages on starter and anode only and can be fed from a.c. or d.c. anode voltages.
ZC1050	300	180	136	265	–	1-10	10	7.5-30	–	–	Ruggedized cold cathode trigger tube with pure molybdenum electrodes. A very high light output makes this tube especially suitable for use in moving text display shift registers for switching and indicator functions.
ZC1060	100-800	–	–	–	–	20 mA to 5000A	5000A	–	–	125	Subminiature cold cathode trigger tube for switching very high peak currents, e.g. in capacitor discharge circuits. The tube contains an internal cathode, an internal anode and external (capacitive) starter.

ELECTRONS HI-CONTRAST DIGITAL READOUT

Electrons Digital Readouts features an easy to read, bright display with low voltage operation from inexpensive integrated circuit modules. Illuminated Segments emit an even distribution (no breaks in light pattern) at the viewing surface. High contrast and brilliance is extended to 150° in any plane, thus eliminating parallax problems. Readouts can be made with any number and combination of digits, spaces and special characters.

ULTRACOLOR — These tubes are manufactured to all of the essential original equipment specification; will utilize rare earth or sulfide phosphors, new electron guns, and may or may not utilize used glass and other materials.

MONOCHROME — All materials and parts used in the manufacture of General Electric monochrome picture tubes are new except for the envelope which, prior to re-use, has been inspected and tested to meet our high-quality standards.

FIVE STAR TUBES

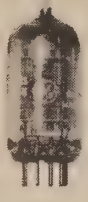
In industrial and communication equipment — critical sockets where there can be no compromise with electronic tube performance — you can depend on the proven reliability of GE Five-Star tubes. Their high reliability is a result of special design features, special manufacturing processes, special tests, and stabilizing periods.

5670

6146A

INDUSTRIAL RECEIVING TUBES

For industrial and military applications involving electronic instrumentation and control, there is a G-E industrial receiving tube specifically designed to meet your particular requirement.



6661

6688A

ENTERTAINMENT TUBES

G. E. offers a full line of entertainment tubes encompassing the fields of radio, TV, and hi-fi. Featured as a portion of this line are 26 types specifically designed for high-fidelity monaural and stereo applications.

5963

5965A

COMPUTER TUBES

Two complete tube lines, Computer and Five-STAR Computer, are designed to meet the specialized needs of the computer industry. Outstanding features include: high perveance, low heater power requirements, controlled cutoff characteristics, and long life.

18 VALUE-ANALYZED benefits of GE 5-Star Tubes...

- Controlled inside diameter on bulbs reduces vibrational output and microphonics.
- Highly efficient getter performs throughout tube life and guides flash to avoid inter-element leakage.
- A getter flash shield improves initial leakage characteristics.
- Two double mica spacers, with additional anti-leakage slots, brace internal parts, provide superior inter-element insulation and improve vibration characteristics. 12 or 16 contact points give firmer fit between bulb and mount.
- Short, sturdy cages increase rigidity of tube structure.
- Plate ears are embossed for added strength and improved mica fit.
- U-bolt construction through top and bottom micas firmly secures the cage assembly.
- Smooth grid legs prevent a "sawing" action on the mica, reducing grid vibration and microphonic noise.
- Critical grids are plated with gold or silver to minimize grid emission.
- Passive cathode alloys assure reliability and long life in low-duty cycle circuits where interface tends to develop.
- Outside diameter and density of cathode coating are statistically controlled.
- Low thermo-conductivity cathode tab reduces heat loss.
- Cataphoretic coating of all heater bends after forming insures complete heater-cathode insulation.
- Folded heater design proved most reliable under shock, vibration and heater cycling conditions. Heater is temperature-controlled to further improve reliability and lengthen life.
- Rhenium-tungsten heater material increases tensile strength, reduces brittleness, and allows larger-diameter heater wire.
- Lead-glass stems help ward off glass electrolysis.
- Pins are annealed to prevent glass strain at socket insertion.
- Stem design minimizes welds — fewer points of possible failure — less change of short-causing particles from weld splash.

Ignitrons

GENERAL ELECTRIC

Ignitrons are gas-discharge tubes employing a mercury pool as the cathode. The mercury pool cathode provides extremely high emission capability. Initiation of conduction in the ignitron is accomplished by means of a starting electrode called the ignitor. The ignitor is a small rod of highly refractory material which dips into the mercury pool. The passage of ignition current through the ignitor causes a cathode spot to form at the junction of the ignitor and mercury pool. Ionization from the cathode spot spreads throughout the volume of the ignitron and when the anode is positive electrons flow to it. By control of the point in the A-C cycle at which the ignitor is fired the duration of current flow through the ignitron is controlled. The ignitron, therefore, is ideally suited for high current rectification and control service. The following charts present summarized rating information for General Electric ignitrons. All ratings are based on 25-60 CPS operation. For convenience to the user the ignitron types are grouped by typical application service. Many types are rated for more than one service and therefore appear in two or more rating charts. More detailed ratings are available upon request for all of the G.E. ignitrons listed.

The ignitron has long been recognized as a long life, highly reliable device. As the industry's leading ignitron manufacturer General Electric is pleased to present the information contained in this booklet and invites your inquiry for additional application assistance if required.

IGNITRON ACCESSORIES

THERMOSTAT KITS

Kit includes thermostat and spring-loaded fastener in a captive assembly for connection to mounting pad located on ignitron water jacket.

Single-pole contacts perform control functions as shown in chart below.

Kit No.	Function	Contacts	Temperature Open (°F)	Temperature Close (°F)	Termination
N15272AA	Water control	NO	86	96	36-inch leads with spade terminals
N15273AA	Over-temperature protection	NC	125	105	36-inch leads with spade terminals
N15286AA	Water control	NO	86	96	Terminal block
N15287AA	Over-temperature protection	NC	125	105	Terminal block

COOLING CLAMP

Suitable for use with GL-5550, GL-7171 and GL-7703 to accomplish cathode connection and liquid cooling: Cat. No. L 6922259-G5

IGNITOR TERMINAL CONNECTING LEADS

Insulated leads for connection to 0.250-inch diameter ignitor terminals

Cat. No. N 22006LC — 7¾ inches long
Cat. No. N 22007LC — 13½ inches long

QUICK-CHANGE WATER CONNECTORS

Ignitron installation time is reduced through the use of slotted anode and cathode terminals . . . provided as a regular feature on all standard G-E welding ignitrons . . . and the use of the quick-change brass water hose connectors shown in table.

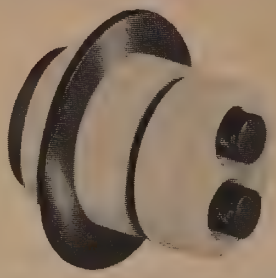
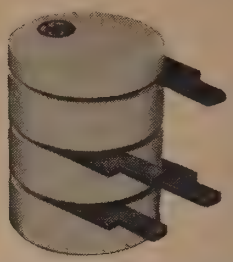
CONDENSED WARRANTY INFORMATION

G-12—
(Rectifier service only.) Warranted for full replacement within one year of service. Expires 18 months from date of sale to ultimate user or two years from date of shipment by G.E.

H-12—
Warranted for one year with prorated adjustment after 15 days of service. Expires 18 months from date of sale to ultimate user, 12 months from date of initial installation, or 2 years from date of shipment by G.E.

H-24—
Warranted for two years with prorated adjustment after 15 days of service. Expires 36 months from date of sale to ultimate user, 24 months from date of initial installation, or 3½ years from date of shipment by G.E.





K-1000—
Warranted for 1000 operations or six months of service with prorated adjustment for the difference between elapsed number of operations and 1000. Expires nine months from date of sale to ultimate user, six months from date of initial installation, or twelve months from date of shipment by G.E.

NOTES

(1) Peak inverse voltage.
(2) This is the bogey value at which average characteristics are determined. For some classes of operation a lower value may be recommended.
(3) These are the highest values listed for any class of CW operation; lower values may be indicated for some classes of CW operation. Refer to complete data sheets for this information.
(4) Adjusted for Ib=75 milliamperes.
(5) Peak voltage rating for pulse service.
(6) Pulse service.
(7) Adjusted for Ib=70 milliamperes.
(8) The frequency listed is one at which significant application data are available or expected, and does not necessarily represent an absolute frequency limit.
(9) Adjusted for Ib=10 milliamperes.
(10) Adjusted for Ib=10 milliamperes; range must be variable from 75 to 200 volts.
(11) Bypassed resistor (18k) in plate-supply lead.
(12) With Rk=910 and Eg=+6.0 volts.
(13) With Rk=270 and Eg=+6.0 volts.
(14) Bypassed resistor (17.5k) in plate-supply lead.
(15) Plate dissipation of 100 watts is permissible with forced-air cooling.

Special Devices — Photo Conductive Cells

GENERAL ELECTRIC

Reliable, hermetically sealed, or plastic encapsulated, cadmium sulfide and cadmium selenide photoconductive cells are available in a wide assortment of package sizes and electrical characteristics.

Photocell-lamp combinations consist of a photoconductive cell and an illumination source enclosed in a light tight, metal package available in an assortment of electrical characteristics.

NOTES

(1) The time required for current through the cell to reach 90% of its steady value upon switching from darkness to a light level of 5 footcandles.
(2) The time required for current through the cell to decrease to 10% of its steady value upon switching from a light level of 5 footcandles to darkness.
(3) This dissipation is allowable at ambient temperatures from −40 to +40C. From +40 to +65C, the allowable dissipation decreases linearly, reaching zero at +65C.
(4) Measures approximately 30 seconds after removal of illumination of two footcandles produces by a tungsten-filament source operated at a color temperature of 2854 Kelvin and at rated cell voltage.
(5) This dissipation is allowable at ambient temperatures from −40 to +40C. From +40 to +80C, the allowable dissipation decreases linearly, reaching 37 milliwatts at +80C, and going to zero above +80C.
(6) Measured approximately 20 seconds after removal of illumination of two footcandles produced by a tungsten-filament source operated at a color temperature of 2854 Kelvin; d-c polarizing voltage 12 volts.
(7) Allowable dissipation may reach 500 milliwatts with external heat-conducting bracket.
(8) For a maximum of 20 minutes at 12-hour intervals.
(9) Measured approximately 30 seconds after removal of illumination of one footcandle produced by a tungsten-filiment source operated at a color temperature of 2854 Kelvin; d-c polarizing voltage 50 volts.
(10) This dissipation is allowable at ambient temperatures from −40 to +30C. From +30 to +65C, the allowable dissipation decreases linearly, reaching zero at +65C.

Special Devices — Reed Switches

GENERAL ELECTRIC

In a relatively short period of years, the dry reed switch has begun to play an important role in performing the switching function for a wide variety of electronic/electro-mechanical equipment. Major application, now in general use, range from telephone switchgear, appliances, and data processing units to logic circuitry for industrial controls.

The General Electric reed switch capsule consists of a pair of low reluctance, magnetically actuated, flat metal reeds, hermetically sealed in an atmosphere of dry inert gas. The reeds are of equal length and are supported as cantilevers, overlapping at the center of the glass cylinder where they are separated by a small air gap, thus forming a normally opn Single Pole, Single Throw (SPST) switch.

NOTES

(1) All switches use single-pole, single-throw, normally open, Form A contact arrangements. With the exception of type DRV120, which is a vacuum switch, all switches are filled with inert gas at an internal pressure ½ atmosphere

(2) Some degradation or improvement in performance may be expected at operating conditions other than those specified.

(3) Sensitivity measured using a 6300 turn coil of #41 wire wound on a 0.8" long bobbin approximately 0.17" in diameter.

(4) Full load, 25 volts d-c, 60 operations per second at H.V.A.

(5) Diffused gold contacts with gold-plated leads.

(6) Rhodium-plated contacts with gold-plated leads.

(7) Sensitivity measured using a 10,000 turn coil of #39 wire wound on a 2.0" long bobbin approximately 0.25" in diameter.

(8) Full load, 50 volts d-c, 60 operations per second.

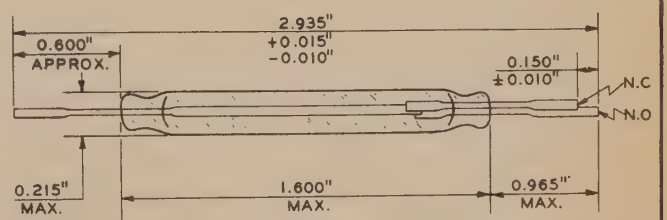
(9) Diffused gold contacts with both leads tinned.

(12) Sensitivity measured using a 10,000 turn coil of #36 wire wound on a 1.750" long bobbin approximately 0.330" in diameter.

(13) Nominal center-to-center of bent leads.

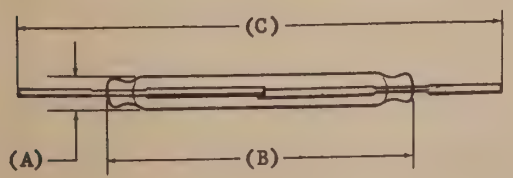
(14) Diffused gold contacts with both leads tinned and bent on 90° angle.

(15) Full load, 125 volts d-c, 60 operations per second.



(16) The voltage rating is a "hold-off" value, and the current rating is a measure of the current the contacts will carry but not switch. Maximum permissible switching currents are to be determined.

(17) Sensitivity measured using a 5,700 turn coil of #36 wire wound on a 2.0" long bobbin having an oval cross-section of approximately 0.5" x 0.28".



(18) Rhodium-plated contacts with both leads tinned.

▲ Electrical and Mechanical replacement for other type listed. May require change in water control or oven temperature protection switches.

§ Minor dimensional and voltage differences exist which will not affect interchangeability in most circuits. * General Electric Five-Star Type

This interchangeability listing has been prepared to help you find a GE replacement for your tube requirements. It is believed to be accurate as of date issued. However, no responsibility is assumed by the General Electric Company for its use; nor for any infringements of patents or other rights of third parties which may result from its use.

HIGH EFFICIENCY POWER TUBES

Because of their proven reliability, long life and high efficiency, Penta power tubes are specified by an ever increasing number of equipment manufacturers. More and more power tube users, too, now specify Penta tubes for replacements. Extra care in every step of production and test assures you of top performance and quality in each Penta power tube you buy.

ELECTRICAL SPECIFICATIONS

PL-5D22 (4-250A) Power Tetrode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
5.0	14.5	250	4,000	350	800	$ 46.50

Power tetrode, used in communications and amateur equipment. Can be used at full ratings up to 75 Mc. and with reduced ratings to 120 Mc. Unusually small amount of driving power normally required for specified value of power output. Useful as r-f power amplifier, or a-f amplifier and modulator.

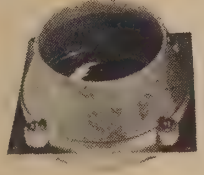
PL-6775 Power Tetrode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
5.0	14.5	400	4,000	350	800	$ 52.00

Ruggedized power tetrode, unilaterally interchangeable with 4-400A. Can be mounted in any position, will withstand high levels of shock and vibration. Design minimizes possibility of inter-electrode shorts. One-piece plate seal and cap can't loosen, fall off, or easily break. Excellent in applications where high level of reliability is required.

PL-8438/4-400A Power Tetrode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
5.0	14.5	400	4,000	350	800	$ 48.00



Widly used power tetrode. Excellent as r-f amplifier and a-f amplifier and modulator. Penta unique ribbed-anode construction provides large effective plate radiating area, with minimum plate, screen-grid and control-grid temperatures.

PL-8295/172 Beam Pentode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
6.0	8.2	1000	3,000	1000	600	$155.00

1000-watt beam pentode. Provides high power gain and good efficiency at relatively low plate voltages. Cooled by forced air. Widely used as Class-AB_1 linear amplifier, delivering over 1500 watts useful power output. Also excellent for Class-AB_2, Class-B, and Class-C service.

Accessories	Type	Description	List Price
	PL-184A	Socket for PL-8295/172 and PL-8295A, including the chimney. Suppressor-grid contacts are grounded.	$49.00
	PL-265A	Sockets for PL-264. Includes chimney, screen-grid by-pass capacitors. Provides for correct distribution of air for proper tube cooling at full rated plate dissipation.	$53.00

Penta Laboratories, a name well known in the electronics industry for over 17 years, is now a division of KILOVAC, leading manufacturer of high voltage vacuum relays and capacitors.

AJ2100 SERIES — Except for AJ numbers listed on the price schedule (sockets & adaptors), other AJ numbers refer to special accessories for the RCA 8568 super power Klystron used in very sophisticated Gov't Systems. Orders thru distributors will be handled in same manner as Developmental types. Contact your RCA Distributor for price and delivery information.

DEVELOPMENTAL TYPES — RCA tube type numbers which have an 'A' or 'C' prefix are usually identified as **Developmental** types. Contact your RCA Distributor for price and delivery information.

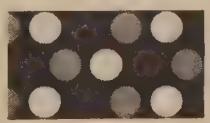
The replacement picture tube no other color tube can replace!

Now you can install the revolutionary Chromacolor picture tube in almost any brand of 23" (diag.) color TV. And let your customer see the difference: a new, sharper Chromacolor picture with greater brilliance, contrast and color definition.

Zenith pioneered, developed and patented (U.S. Patent No. 3146368) the Chromacolor picture tube. And only Zenith has Chromacolor.

Chromacolor is an easy sale because people already know of Chromacolor's superiority. (Last year, after the revolutionary new Chromacolor system was introduced, Zenith giant-screen color TV sets became the No. 1 best-seller!)



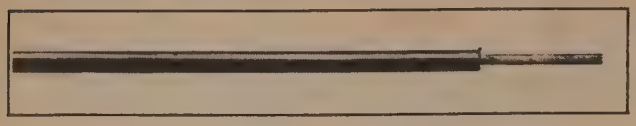
Full two-year warranty.

Here's your sales clincher: Chromacolor replacement color tubes are warranted for two full years. Exactly double the warranty period for most other replacement color picture tubes.

Give your customers the best — Chromacolor replacement color tubes. Only your Zenith Distributor has them.

TWO-YEAR WARRANTY

Zenith Radio Corporation warrants the replacement CHROMACOLOR picture tube to be free from defects in material arising from normal usage for two years from date of original consumer purchase. Warranty covers replacement or repair of picture tube, through any authorized Zenith dealer; transportation, labor and service charges are the obligation of the owner.



Zenith Chromacolor picture tube pinpoints the color dots on a jet black background and for the first time fully illuminates every dot.

Mil-W-16878D

TYPE B—UNCOVERED PLASTIC

Pre-Bonded Tinned Copper Conductor

DESCRIPTION:
Each strand of the conductor is double tinned and then heated, which bonds the individual strands together for easy stripping. Color coded .010" polyvinylchloride insulation. The insulation meets requirements of MIL-W-16878D.

CHARACTERISTICS:
Temperature rating —55°C to +105°C. Voltage rating 600 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATION:
A pre-bonded conductor is the ideal construction when leads are to be cut and stripped for point to point wiring. The pre-bonded conductor maintains much of the flexibility of an ordinary stranded wire but reduces processing and handling costs on soldering, retwisting of strands after stripping and hand tinning operations. Since the individual strands are bonded, expensive induction heating equipment is unnecessary.

Flat Ribbon Cable

MULTI-CONDUCTOR — PLASTIC INSULATION CONDUCTORS PER MIL-W-16878D, Type C

DESCRIPTION: Each conductor stranded tinned copper, color coded .016" polyvinyl chloride insulation, conductors bonded together to form flat ribbon cable.

CHARACTERISTICS: Temperature rating −55°C to +105°C. Voltage rating 1000 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATIONS: Saves time, weight, and space on circuit connections, interconnecting assemblies and systems, wiring harnesses for racks, sliding drawer and drop panels. Conductors fully color coded and easily separated for neat terminations.

Shielded Microphone Cable

PLASTIC JACKET

DESCRIPTION: 1702-1706: Single conductor, stranded tinned copper, white polyethylene insulation, braided or spiral wrapped tinned copper shield, gray polyvinylchloride jacket overall.

1709-1712: Each conductor stranded tinned copper, color coded polyethylene insulation, cabled with fillers, textile wrap, braided or spiral wrapped tinned copper shield, gray polyvinylchloride jacket overall.

APPLICATIONS: 1702-1706: All high impedance microphones, lapel, ribbon, velocity, crystal contact, hi-fi interconnecting cables.

1709-1712: All low impedance microphones—carbon, condenser, dynamic.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C.

RUBBER AND NEOPRENE JACKETS

DESCRIPTION: Each conductor stranded tinned copper, color coded rubber insulation, cotton wrap, braided tinned copper shield, cotton wrap, tough black rubber or neoprene jacket overall.

APPLICATIONS: 1248-1449: All high impedance microphone, broadcast and heavy duty studio use, communication and audio systems.

1250-1450/16: All low impedance microphone, broadcast and heavy duty studio use. Can also be used for control circuits, video and audio interconnection cable, and as electronic power cables.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C.

Rubber jacketed cable suited for standard duty indoor use.

Neoprene jacketed cable suited for heavy duty outdoor use and direct burial. Will resist oil, acid, sunlight, ageing and abrasion.

CELLULAR FOAM POLYETHYLENE INSULATION — PLASTIC JACKET

DESCRIPTION: Single conductor, stranded tinned copper, white foam polyethylene insulation, braided tinned copper shield, chrome gray polyvinylchloride jacket.

Two conductors, stranded tinned copper, color coded foam polyethylene insulation, 1 white and 1 black, cabled with fillers, textile wrap, braided tinned copper shield, chrome gray polyvinylchloride jacket.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C. Low loss foam polyethylene provides lower capacitance and attenuation than standard solid polyethylene microphone cables, thereby increasing the effective length of usable cable without loss of signal.

E-Z-Strip Lamp Cord

U.L. APPROVED

DESCRIPTION: Conductors parallel, stranded extra flexible bare copper, rubber or polyvinylchloride jacket overall. Slit in jacket to permit "E-Z" separation.

APPLICATIONS: For line cord on radios, lamps, electric clocks, food mixers and other small instruments and appliances.

CHARACTERISTICS: Suggested operating temperature: −20°C to +60°C. Suggested operating voltage: 300 volts.

SPIRAL WRAPPED COPPER SHIELD

DESCRIPTION: Each conductor stranded or solid tinned copper, color coded polyvinylchloride insulation, conductors twisted, spiral wrapped copper shield, gray polyvinylchloride jacket overall. **Nominal jacket thickness .020".**

CHARACTERISTICS: Use of spiral shield makes pigtailing off extremely simple and fast. Excellent for production line work. Provides close to 100% shielded coverage for audio and RF frequencies. Suggested operating temperature: −20°C to +60°C.

BRAIDED COPPER SHIELD

DESCRIPTION: Each conductor tinned copper, color coded polyvinylchloride insulation, conductors twisted, braided copper shield, gray polyvinylchloride jacket overall. Suitable for outdoor installations.

CHARACTERISTICS: A conventional type of braided shield providing approximately 75% coverage is particularly desirable where flexibility is required. The copper shield allows ease of pigtail soldering. Shield construction provides additional cable strength. Operating temperature: −20°C to +60°C. **Nominal jacket thickness .020".**

APPLICATIONS: For public address and sound systems, ideal for recording studios, amateur radio transmitters, shielded power or electronic circuits, wherever an economical shielded cable is required.

MULTI-CONDUCTOR — PLASTIC JACKET

DESCRIPTION: Each conductor tinned copper, color coded polyvinylchloride insulation, conductors twisted, gray polyvinylchloride jacket overall. Suitable for outdoor installations.

APPLICATIONS: Intercoms. Interconnecting cables. Remote control circuits. Telephones. Telemetering connecting cable. "Baby Sitter" intercom.

CHARACTERISTICS: Suggested Operating Temperature: −20°C to +60°C

MIL-W-16878D Miniature Teflon Wire

TYPE ET – EXTRUDED (250 VOLTS)

DESCRIPTION: Single Conductor stranded Silver Plated Copper, extruded TFE Teflon insulation.

CHARACTERISTICS: Temperature rating −65°C to + 200°C. Voltage rating 250 Volts. Resistant to acid, alkalis, oil, flame moisture, solvents and fungus.

APPLICATION: Type ET Wire is intended for limited use in low-voltage and high temperature applications (suitable for ultra-high frequency use).

Shielded Audio & Data Cable

INDIVIDUALLY SHIELDED MULTIPLE PAIRS — PLASTIC JACKET

NEW

DESCRIPTION: Each conductor, tinned copper, color coded, high density polyethylene, conductors twisted into pairs. 22 gauge tinned copper drain wire. Mylar-supported aluminum foil shield, aluminum facing inward. Chrome Grey PVC jacket overall.

CHARACTERISTICS: Mutual conductance between conductors of a pair, 25 pf/ft. Capacitance of a single conductor to shield, 45 pf/ft.

APPLICATIONS: For audio, R.F. and pulse applications requiring superior circuit isolation.

Shielded Plastic Jacketed Cable

MYLAR SUPPORTED ALUMINUM FOIL SHIELD

DESCRIPTION: Each conductor stranded tinned copper, color coded polyethylene insulation, conductors cabled, wrapped mylar supported aluminum foil shield, 100% coverage with drain wire laid parallel, aluminum foil facing outward to provide maximum ground, gray pvc jacket overall.

CHARACTERISTICS: Operating temperature: −20°C to +60°C. Operating voltage: 400 volts. Light weight, reduces cable diameter, and provides 100% shield coverage.

RETRACTILE COIL CORDS

POWER CORDS—NEOPRENE JACKET U.L. APPROVED

RETRACTED LENGTHS 2 & 4 FEET—EXTENDED LENGTHS 12 & 25 FEET

DESCRIPTION: Long-lasting service is assured with this quality multi-conductor power cord. Each conductor is stranded copper, with rubber installation, and a rugged weather and oil resistant neoprene jacket overall.

APPLICATION: Used on electric tools, portable drills, soldering wires, electrical appliances, household appliances, etc., to eliminate loose hanging wires and to prevent wires from tangling and twisting.

CHARACTERISTICS: Suggested operating temperature: 20 C to 60 C.

DESCRIPTION: Multi-conductor communication cord manufactured with extra flexible #23 AWG-21 36 tinned soft cadmium copper for maximum flex life. Insulated with rubber, for communication circuits of maximum 120 working volts. The overall jacket is a specially compounded cured neoprene jacket giving long life to the retractile cord.

APPLICATION: Used in communication equipment, such as telephone car carriers, mobile radio equipment, ham operations, head sets, citizen band units and radio transmitter to receiver head sets, communication cords eliminate hazards and inconveniences caused by tangled straight cords.

Oval Commercial Braid

DESCRIPTION: A woven tinned copper braid which is left in the tubular configuration as it leaves the braiding equipment. It is manufactured to a specific inside diameter but because of its extreme flexibility cannot maintain its completely round shape and becomes oval.

Tinned Copper Tubular Braid To MIL Spec QQ-B-575

DESCRIPTION: A woven tinned copper braid which is manufactured completely round as outlined in Mil Spec QQ-B-575. Each strand of the braid is soft drawn tinned copper wire. The braid is self-supporting and maintains its round configuration. The percentage of shielding coverage is 95% or more when placed over a mandrel of an equivalent diameter to the inside braid diameter.

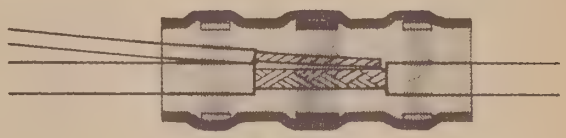
FIT® SOLDERING SLEEVES

Solders – Insulates – Encapsulates for Wire Splicing and Shield Grounding

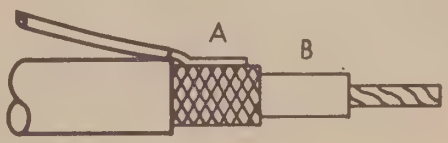


Meets Performance Requirements for MIL-F-21608A, MIL-T-7928

A new pre-packaged soldering device that insulates, encapsulates and prepares a reliable, uniform solder joint.

The sleeve consists of an irradiated, heat-shrinkable, polyolefin sleeve containing a preform of fluxed solder at the center and a thermoplastic sealing ring on each end. When placed over a cable shield and ground lead, or splice, and briefly heated, the outer sleeve shrinks and the solder and thermoplastic inserts melt forming an insulated, encapsulated, soldered termination.

Soldering sleeves offer many advantages over crimped and other forms of connection including; the proper type and quantity of solder for each joint; easy observation of solder flow, and inspection of completed joint: built-in stress relief by shrinkage of sleeving over ends of insulated wire, giving longer life and greater flexibility at connection points. Cost savings are gained by eliminating braid cutting; space saving; and excellent moisture and environmental resistance characteristics.



Soldering sleeves may be used in shield ground applications, as junctions or as a stub splice. The FG-1 heat gun with soldering sleeve reflector is recommended. Heating time is from three to five seconds. Heat should be maintained on sleeve until solder ring changes from dull grey to bright silver and flows toward dam on both ends of sleeve.

Sleeve Types

FSL sleeves contain a solder alloy of 51.2% tin, 30.6% lead, 18.2% cadmium to MIL-F-14256. Solder melting temperature is 293°F. Application includes use on vinyl, vinyl-nylon and other thermoplastic insulations.

FSH sleeves contain an Sn63 solder preform to QQ-S-571 and are coated with activated resin to MIL-F-14256. Solder melting temperature is 361°F. Applications include use on teflon, high temperature and irradiated insulations.

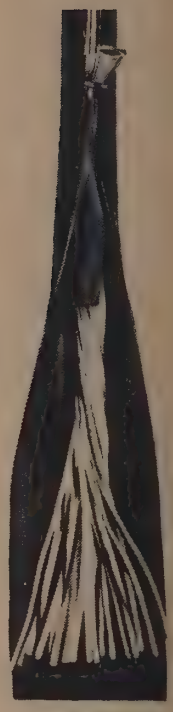
ALPHLEX® ZIPPER TUBING

DESCRIPTION Alphlex Zipper Tubing is the all purpose modern way to harness, cover and protect cables. Just zip to close — and zip to reopen. If you wish, it may be permanently sealed with PB-200 Special Compound Liquid Sealer. Alphlex Zipper Tubing is strong, flexible, durable, and offers new freedom in design, production and repair.



APPLICATIONS To shield, to harness wire, to custom-cable to any length, to enclose, to encase, to identify (such as cable markers), to protect, to replace worn jackets.

Alphlex® Polyvinylchloride Plastic Tubing (PVC-105)

CONFORMS TO MIL-I-631D †

DESCRIPTION: The superior mechanical, thermal, and electrical properties of Alphlex PVC-105, coupled with its economical cost have led to an ever increasing use of this all-purpose insulating material. Another major advantage of Alphlex PVC-105 is its high degree of flexibility, which is maintained even under severe environmental conditions.

Rated for temperatures as high as 105°C, PVC-105 has a high dielectric strength that remains unaffected by increasing temperature throughout its range. PVC-105 maintains a high resistance to the agents of heat, oil, chemical corrosion and fungi with no loss in tensile strength, or flexibility. Other features include an exceptional resistance to abrasion and indefinite shelf life.

Alphlex PVC-105 is compounded with first quality, non-migratory resinous type plasticizers. Carefully selected stabilizers and modifiers added in the manufacturing process, counteract chemical and environmental degradation. Under adverse conditions Alphlex PVC-105 retains its flexibility which permits it to cling to and protect irregular shapes. An unusually simple to handle insulating material, PVC-105 "snakes" well under all environmental conditions.

APPLICATIONS: Designed and manufactured for general electronic, aircraft and electrical applications involving temperatures as high as 105°C. Especially useful to protect wires and cables subject to abrasion or where a flexible tubing with a high degree of resistivity to oil, chemicals or solvents is necessary.

Alphlex® Teflon Extruded Tubing

CONFORMS TO MIL-I-22129B

DESCRIPTION: Alphlex Teflon Tubing is unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures. Teflon is rated for continuous operation at 250°C, and retains an exceptional toughness and its flexibility throughout its temperature range.

Alphlex Teflon Tubing has the further advantage of a high degree of resistance to flexural fatigue and repetitive stresses; coefficient of friction lower than that of any other known solid; and a dielectric constant and power factor lower than that of any other known solid. This tubing will not crack or become brittle during aging.

Because of its resistance to soldering iron temperature, Alphlex Teflon Tubing will not shrink back during the soldering process. Alphlex Teflon Tubing will not melt and flow as do conventional thermoplastic materials. At high frequencies, its dielectric strength is many times that of other insulating materials.

Alphlex Teflon Tubing is chemically inert, has zero moisture absorption and its insulation resistance properties are unaffected by heat aging or temperature use up to 250°c.

APPLICATIONS: A thin flexible insulation, Alphlex Teflon Tubing permits a miniaturization and compactness of design never before possible. Invaluable in any application where a high heat resistant, flexible, non-flammable, chemical solvent and corrosion-resistant material is required.

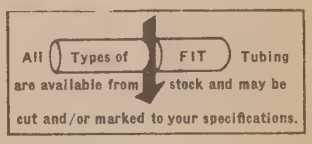
Irradiated Polyolefin Tubing

NEW ALL-PURPOSE SHRINKABLE TUBING — FIT-221

- SHRINKS 50% (2:1 RATIO) WITH ONLY 5% LONGITUDINAL SHRINKAGE
- FEWER SIZES COVERING MORE APPLICATIONS
- AVAILABLE TO MEET U.L. SPECIFICATIONS
- MEETS MIL-1-23053A (WEP)
- AMS SPECIFICATIONS 3636A (COLOR), 3637 (CLEAR)



DESCRIPTION: Alphlex FIT-221 Shrinkable Tubing, when heated, forms a tight-mechanical bond, even over irregularly shaped materials. FIT-221 is available in a range of colors and in clear.

FIT-221 is an all-purpose polyolefin extruded tubing that is simple to use and provides a tight mechanical bond. FIT-221 is an irradiated, thermally stable, modified polyolefin base product. FIT-221 Clear may be used so that jacketed, printed components or cable data is clearly visible and inspection of insulated components, cables or terminations is simplified.

The tubing is supplied in an expanded form and easily slips over the object to be covered. When a temperature of approximately 275°F (135°C) is applied, it immediately returns to its predetermined size (approximately one-half smaller) and forms a permanent tight-fitting mechanical bond. FIT-221 Tubing will not cold-flow or melt but retains form stability throughout its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is 5% maximum when completely recovered.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 225°F to 255°F. Shrinkage will begin at 235°F, but at a somewhat slower rate. When using an oven, temperature may range from 235°F to 300°F. Prolonged exposure to these temperatures will not affect the physical or electrical properties of FIT-221 Shrinkable Tubing. FIT-221 Clear Tubing remains transparent over its entire operating range of −55°C to 135°C.

FLAMMABILITY: Although FIT-221 Clear is a high temperature material, it is flammable and will burn. However, when the tubing is shrunk over non-flammable or flame-resistant components, such as connectors, terminals and wire, the entire assembly will not support combustion.

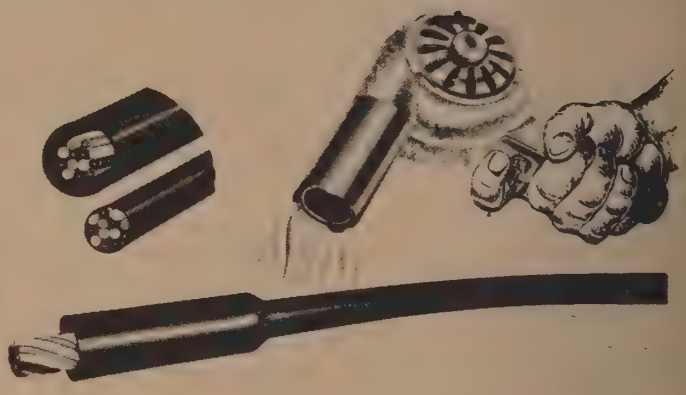
Irradiated Polyvinylchloride Tubing FIT-105

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

HIGHLY FLEXIBLE — IDEAL FOR CABLE JACKETING

Conforms to MIL-1-631D, Type F, Form U, Grade C, Class 1, Cat. 1

SHRINKAGE RATIO 2:1 (50% Shrinkage)



DESCRIPTION: Alphlex FIT-105 is an easy-to-use modified polyvinylchloride that provides a snug, extremely flexible insulation.

Because of its flexibility, strength and its ability to shrink 50% on application of heat, FIT-105 is ideally suited for insulating components and cables with a wide variation in shape and diameter.

Because of the 50% expanded diameter of FIT-105 Tubing, it is an extremely useful cable jacketing material. Cable cores may be pulled through FIT-105 Tubing with comparative ease and shrunk down to form a jacket with all the qualities of the finest extruded plastic jackets.

The tubing is supplied in expanded form and in continuous lengths. When a temperature of approximately 347°F (175°C) is applied, Alphlex FIT-105 Tubing immediately returns to its predetermined size (approximately 50% smaller), and forms a permanent, tight-fitting mechanical bond. FIT-105 Tubing will not cold-flow or melt but retains form stability within its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is less than 10%.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 325°F, or above. When using an oven, temperature may range from 325°F to 350°F.

new ideas for moving electrical energy

FOREWORD

The purpose of this catalog is to make the selection, purchase and overall usage of Belden Electronic Wire and Cable products easier for you, the customer.

Many of the products listed in this catalog have enjoyed wide acceptance over the years. Some of the newer items are on the way to earning their own reputations for excellence and reliability in the field. They are the recent products of Belden's product development engineering group which starts with the electrical, physical and thermal needs of the applications. Working from the ground up they design and develop a wire, cable or cord that will meet or exceed these requirements.

INNOVATIONS

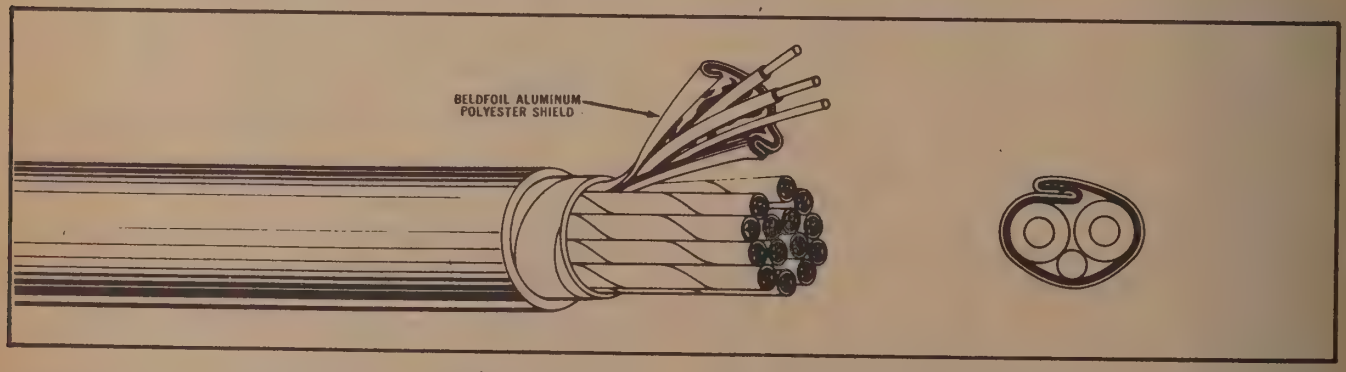
Over the years, Belden has pioneered the development of a number of significant design breakthroughs and new engineering techniques which have provided remarkable new products to meet the challenging and ever-changing technology.

Whatever your specialized problems . . . . whatever your needs for wire and cable, you can count on Belden's experienced design and engineering talents and resources to help you develop the best solution to your wire and cable application problems.

Belden is constantly reviewing new materials, insulations, compounds and shielding applications to develop products to satisfy customer's needs.

TESTING

Belden's products must meet the highest standards of quality control in the industry. High-performance test equipment can simulate practically every known environmental or electrical condition to assure positive, reliable ratings for the most trouble-free operation under known and predictable conditions. Belden's rigid test program assures consistent product reliability from design through packaging.



MANUFACTURING

Belden designs and builds much of its own specialized manufacturing equipment. To the customer, this means only one thing: scrupulous and uncompromising supervision of the entire manufacturing process that starts with the equipment used to make the product and assures complete, beginning to end, manufacturing integrity.

SALES ENGINEERING

The total experience and capability of Belden's engineering department is available to you at any time to assist in specifying or developing wiring products that can provide the best and most practical solutions to your specific application requirements.

The Beldfoil® ISO-Shield Story

Much of today's miniaturized, high-gain electronic equipment calls for small diameter cables that are lightweight, flexible and has total electrostatic shielding.

Wire braid and serve type shields have a practical range up to 97 percent maximum coverage. While they provide sufficient electrostatic shielding for many applications, they do not furnish the full-coverage shielding required by many high-gain electronic systems.

Beldfoil ISO-Shield provides 100 percent coverage and adds greater effectiveness to all major shielding functions: excluding external signals, confining the transmitted signal and minimizing crosstalk.

Beldfoil ISO-Shield uses a thin layer of aluminum bonded to a polyester film. The aluminum provides the necessary electrostatic shielding while the polyester film adds a bonus insulation and increased mechanical strength. The 100% shielding is accomplished by an exclusive method of folding back both edges of the tape in such a way as to provide metal-to-metal contact between adjacent wraps, thus providing the same shielding effect as a continuous aluminum tube. As a direct result of using this thin layer of aluminum-polyester shielding, Beldfoil ISO-Shield is lightweight, flexible and small in diameter. Depending on the cable type the polyester film may be used to increase the dielectric strength between the conductors and the shield, or to provide insulation between adjacent shields.

Applications for Beldfoil ISO-Shield range from a single conductor audio and sound cable to complex multi-conductor multi-shield cables. They include cables for data processing systems, telemetering equipment, strain gauge applications, hi-fi systems, instrumentation, TV cameras and receivers, microphones and communications equipment plus many special constructions for both military and commercial use.

HOW TO USE THE CABLE FINDER CHART

Match the desired "Number of Conductors" column with the required "Conductor Size" to find the applicable Belden Trade Number and its catalog page.

For cables with more than 8 conductors, see Multiple pair and unpaired unshielded cables on page 9 & 11, Multiple pair individually shielded on pages 6, 7 & 8. For cables combining shielded and unshielded conductors, see Special Audio and Communication cables on page 7.

COMMUNICATIONS CABLE

Belden offers a complete line of Communications Cables to provide customers with the best all-around cable for every application requirement. Cables are available in a wide range of sizes, dimensions, shielding constructions and types of insulation. All Communications Cables are designed to protect the desired signal by eliminating or minimizing the interference of hum, noise and crosstalk.

SHIELDING: Because it affords such excellent protection, Beldfoil ISO-Shield is now being specified for many critical applications such as instrumentation systems, tracking station equipment, computer and data processing systems, audio, sound, strain gauge and control cables.

No other type of shield on the market surpasses Beldfoil Shield for full coverage and protection against radiation and penetration at audio and radio frequencies. Beldfoil's unique polyester-aluminum shielding provides 100% coverage.

Braided Copper Shields have high tensile strength and are very effective at audio and radio frequencies in flexing applications. Served Copper Shields usually provide more coverage than Braided Copper Shields; they're also easier to terminate. Both Braided and Served Copper Shields are recommended at audio frequencies.

INSULATIONS: Belden's Communications Cables are available in a variety of insulation materials, each having its own advantages depending upon the size requirements, environmental and electrical conditions dictated by the application.

Vinyl insulation resists flame, most solvents, oil, ozone and sunlight. It has a higher dielectric constant and capacitance than polyethylene. Therefore it is recommended for audio frequency applications. It is easy to strip.

Polyethylene insulation is lightweight and resists ozone. It has a low dielectric constant for low capacitance and provides low electrical loss and is recommended for audio and radio frequency applications. Like vinyl, polyethylene is easy to strip.

Polypropylene insulation provides excellent heat and abrasion resistance. It has a low dielectric constant with equally low capacitance. It is less flexible than polyethylene. Because it has excellent dielectric strength and mechanical ruggedness, polypropylene insulations are widely used for miniaturization applications. Even with low overall diameters, they permit very low loss. Recommended for audio and radio frequencies.

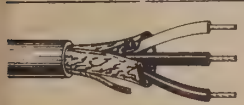
INSTRUMENTATION CABLES



Instrumentation cable provides the vital communications link between sensing devices and read-out equipment. Because of the many and diverse conditions of environment and stress under which instrumentation cables must transmit information — in usable form, without distortion or change — cable characteristics should always be carefully matched with the specific requirements of the particular application.

The scientific, medical and industrial uses of instrumentation cable are vast and ever growing. Some of the common uses for instrumentation cable are such things as measuring pressure, speed, resistance and temperature.

Belden manufactures a wide variety of precision instrumentation wire using several types of insulating materials for conductors and shields to meet a wide variety of electrical, physical and thermal requirements.

Many Belden Instrumentation Cables are unique in the field and have been engineered for specific application problems.

BELDFOIL®

#22 tinned copper, vinyl insulated, cabled in pairs, each pair and its ground wire under BELDFOIL® aluminum-polyester shield, over-all chrome vinyl jacket. 300 Volts suggested working voltage.

Insulation resistance between shields . . . . . 100 megohms/M'
Capacitance between adjacent shields . . . . . 115 mmf/ft
Voltage breakdown between adjacent shields . . . . . 1500 volts
Working voltage between adjacent shields . . . . . 50 volts

Vinyl insulation is used for ease of stripping and soldering. Recommended for audio frequency applications requiring excellent circuit isolation. Maximum operating temperature 80°C.

MULTIPLE PAIR UNSHIELDED SOUND CABLES

TYPICAL APPLICATIONS: Balanced line sound systems.

Made with 80°C vinyl plastic compounds for high dielectric strength, and the best physical properties, such as free stripping, small diameter, and tear resistance. It also resists the effects of water, sun, oil, grease, and ozone. The conductors are paired with a short-lay twist for conductor balance, providing a quiet circuit, free from cross talk.

ALL CONSTRUCTIONS:
Tinned copper, vinyl insulated cabled in pairs, chrome vinyl jacket.

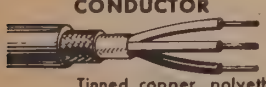
MICROPHONE CABLES

Belden Microphone Cables are designed for flexible service at audio frequencies. They are used not only for microphones, but also for home entertainment equipment, instruments, tape recorders and shielded power supplies.



Shielded single conductor cables are used in high impedance systems, while multiple conductor cables are used in low impedance applications.

All cables are precision-engineered and manufactured to transmit clear signals and to cancel out hum pick-up and crosstalk interference. They are designed to withstand the flexing and normal abuse of studio, laboratory and home usage.

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.
RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.
NEOPRENE AND HYPALON CABLES RECOMMENDED FOR: Outside use, cold weather applications. Resistant to effects of sun, oil, and ozone.

COILED CORDS

Retractile cords keep telephone and microphone cables from tangling and cluttering desk tops, communications consoles and the front seats of motor vehicles. Belden manufactures a full line of high quality retractile coiled cord products for a wide number of applications.

Belden retractile cables and cords are used for telephone equipment; ham and citizen band radios; hand and desktop microphones; language lab equipment; musical instruments; mobile controls and mobile communications equipment and for a variety of assorted industrial applications.

The specially designed conductors and shields of Belden retractile cords are constructed to withstand rugged use and to minimize replacement frequency.

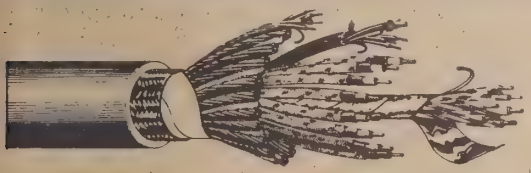
tv camera cable and 75 ohm video cables

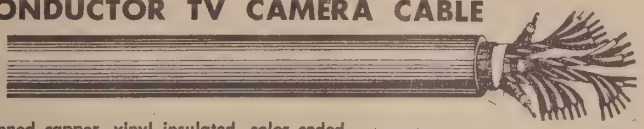


TV CAMERA CABLES

Belden TV Broadcast and Closed Circuit TV Camera Cables assure reliable circuit isolation thereby reducing a-c hum and minimizing crosstalk between circuits. They are made to withstand rugged service and to maintain high conductor insulation resistance regardless of ambient temperature changes.

Major uses for these cables are for controlling, powering and transmitting sound and picture information for monochrome and color TV cameras as well as for remote control, monitor and cue line systems.

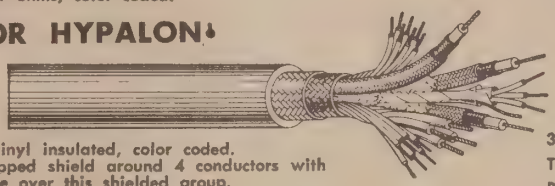
Belden TV Camera Cables are engineered to be lightweight, flexible and easy to terminate. They are manufactured and tested in accordance with Belden's own rigid and time-proven quality control standards in order to assure outstanding reliability, performance and service life.



8283-82 CONDUCTOR TV COLOR CAMERA CABLE

Designed to meet the critical electrical and physical requirements necessary for color television broadcast applications.

4-14 AWG (19x27) tinned copper, vinyl plastic insulated, color coded.
3-16 AWG (26x30) tinned copper, vinyl plastic insulated, color coded. BELDFOIL® aluminum-polyester wrapped shield around the 7 conductors cabled with stranded tinned copper drain wire.
8 coaxial cables. Nom. Impedance 53.5 ohms, color coded.
67-22 AWG (7x30) tinned copper, vinyl plastic insulated, color coded, 7 under conductive textile shield with stranded ground wire.
Tinned copper braid shield.
Chrome vinyl plastic jacket. 1.22" Nom. O.D.
§Cut to customer's specified length. Maximum length 1000'.



8280-28 CONDUCTOR TV CAMERA CABLE

A smaller, lighter weight cable designed to make long runs easier. For black and white (Monochrome) systems.

4-18 AWG (16x30) tinned capper, vinyl insulated, color coded.
21-22 AWG (7x30) tinned copper, vinyl insulated, cabled in 3 groups of 7, color coded.
3 coaxial cables. Nom. impedance 51 ohms, color coded.
Tinned copper braid shield.
Chrome vinyl jacket. .750" Nom. O.D.
§Cut to customer's specified length.
Maximum length 1500'.

8286-28 CONDUCTOR HYPALON♦ TV CAMERA CABLE

A 75 ohm cable designed to remain flexible in cold weather. Recommended for transistorized TV cameras.

4-18 AWG (16x30) tinned copper, vinyl insulated, color coded. BELDFOIL aluminum-polyester wrapped shield around 4 conductors with stranded drain wire, polyester tape over this shielded group.
21-22 AWG (7x30) tinned copper vinyl insulated, cabled in 3 groups of 7, color coded, one group of 7 has a BELDFOIL aluminum-polyester wrapped shield overall with a stranded drain wire, polyester tape over this shielded group.
3 coaxial cables. Nom. impedance 75 ohms.
Tinned copper braid shield.
Black Hypalon jacket. .730" O.D.
§Cut to customer's specified length.
Maximum length 1000'.

8284-24 CONDUCTOR TV CAMERA CABLE

Designed specifically for color TV transmission. This cable incorporates circuit isolation assuring the reduction in AC hum level and cross talk essential for color TV broadcasting.

17-22 AWG (7x30) tinned copper, vinyl insulated, color coded.
3 under BELDFOIL shield with stranded drain wire.
4-16 AWG (26x30) tinned copper, vinyl insulated, color coded.
3 coaxial cables. Nom. impedance 53.5 ohms, color coded.
Tinned copper braid shield. Heavy cotton braid.
Chrome vinyl plastic jacket. .800" Nom. O.D.
§Cut to customer's specified length. Maximum length 1000'.

8282-13 CONDUCTOR TV EYE CABLE

Especially engineered for TV Eye Cameras. Recommended for remote control, monitor and cue line applications.

8-22 AWG (7x30) tinned copper vinyl insulated, color coded.
1-22 AWG (7x30) polyethylene insulated conductor.
2-18 AWG (16x30) tinned copper conductor vinyl insulated.
Black and Red.
1-RG-58A/U cable 50-ohm coax.
1-72-ohm coax, stranded conductor, polyester tape wrapped.
Chrome vinyl jacket. .470" Nom. O.D.
§Cut to customer's specified length. Maximum length 2000'.

§Minimum length 25'. 25' to 99', plus 25' minus 0. 200' or over, plus 50', minus 0.

75 OHM PRECISION VIDEO CABLE

TYPICAL APPLICATIONS: Video signal transmission in Color and Monochrome TV studios. Provides high quality carrier of video signal with superior picture definition and eliminates problems of periodicity. Cable is manufactured with rigid control of concentricity and all dimensional tolerances. The black polyethylene jacket is inherently a non-contaminating, non-migratory compound. 100% SWEEP TESTED.

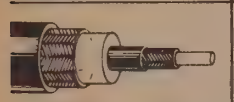
HIGH VOLTAGE CABLES

Belden High Voltage Cables are designed for use by public utilities and laboratories in testing high voltage equipment and apparatus. Through their use, potentially dangerous conditions can be detected both before installation and at intervals during service.



Belden High Voltage Test Cables are engineered to achieve the best possible performance at continual rated voltages. Their special design incorporates the use of conductive polyethylene over the center conductor, bonded to the polyethylene dielectric material. This provides uniform voltage stress distribution around the center conductor and results in an increased elimination of degradation due to internal corona.

For special cables up to 600 KVDC ratings, please ask for individual quotation.

		Tinned copper braid (CMA equivalent to 16 AWG) over solid polyethylene rod, black conductive polyethylene, clear polyethylene insulation, tinned copper braid, black polyethylene jacket.							

Conductive polyethylene over inner conductor combined with a copper wire braid over the dielectric provides uniform distribution of voltage stress. Very high-voltage DC cable applied from 200 KVDC to 600 KVDC is available from Belden on special order. Consult Belden Engineering Department for AC or pulse applications.

MILITARY SPECIFICATIONS PERTAINING TO BELDEN HOOK-UP WIRE

Belden's outstanding line of Hook-Up Wire represents a broad selection of quality products that meets the Military Specifications indicated on this and on the following pages.

Basically, from the customer's point of view, Military Specifications can be a helpful guide in determining specific information about cable construction, electrical limits and test data as an aid in comparing and selecting wiring products to meet the needs of specific applications.

The following Military Specifications cover the Belden Hook-Up Wire Products to be found in this catalog:

MIL-W-16878—Wire, Electrical, Insulated, High Temperature. Covers insulated wire for the internal wiring of meters, panels, and electrical and electronic equipment at temperatures ranging from 105°C to 200°C. The many types available in different voltages and thermal ratings are listed on the following pages to meet your individual requirements.

MIL-W-76—Wire and Cable, Hook-Up, Electrical, Insulated. Covers single conductor, plastic-insulated Hook-Up wire for the internal wiring of electrical and electronic equipment. The many types available in different voltages and outer covering are listed on the following pages to meet your individual requirements.

mil-w-76 vinyl plastic

MIL-W-76

Covers single conductor, plastic-insulated Hook-Up wire for the internal wiring of electrical and electronic equipment. The many types available in different voltages and outer covering are listed on the following pages to meet your individual requirements.

TYPE MW—MIL-W-76—VINYL—1000V-80°C

Tinned copper, vinyl insulated, medium wall. The extruded vinyl insulation is flame and ozone-resistant and is inert to most chemicals, oils, and solvents.

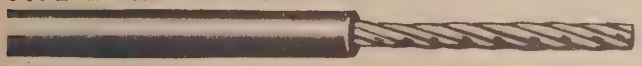
teflon wire



BELDEN

Teflon■ is a fluorinated thermoplastic with outstanding thermal physical and electrical properties. However, because the basic resin and processing costs are relatively high, Teflon is generally restricted to applications requiring its special characteristics.

Belden Teflon wire products are highly recommended for miniature cable applications, because of their superior thermal and electrical properties. Teflon is especially suitable for internal wiring soldering applications where insulation melt back is a specific problem. Belden Teflon wiring products are outstanding in their resistance to oil, oxidation, heat, sunlight, flame and their ability to remain flexible at low temperatures. They all have excellent resistance to ozone, water, alcohol, gasoline, acids, alkalis, aromatic carbon and solvents.

HAG-12 500/750°F Hot Air Gun For PVC Series
HAG-13 750/1000°F Hot Air Gun For TE Series

The quickest and most versatile method for applying heat is the hot air gun noted herein. Also, use of an oven, radiant heat, dipping in hot liquids, or using a soldering iron or the flame of a match.

BIRFLON SHRINK SERIES TE TUBING

HEAT SHRINKABLE TEFLON* TUBING

Is a Class C material modified from polytetrafluorethylene. The tubing will shrink when heated to 621 F. (It should be heated until it turns semi-transparent, then the heating process immediately stopped. Overheating can cause splitting, therefore trial and error testing is recommended to establish the proper time and temperature for each application.) Correct procedure will result in a snug-fitting insulating wrap possessing hi-heat resistance, superior chemical resistance and excellent electrical characteristics. The tubing is available in a full range of colors. Stock colors: black, white, natural.

B-105 EXTRUDED PLASTIC TUBING

APPROVED FOR 105°C.-OPERATION — MEETS MIL-1-631D SPECS — A quality plastic Vinyl tubing designed for electronic and electrical insulation work. Has high dielectric strength, extreme flexibility, non-flammabiltiy, abrasion resistance, impervious to oil, water, alkalies, alcohol, solvents, etc., high heat stability and resistance to aging. Meets all A.S.T.M. specifications, Mil. Spec. (Type F, Form U, Grades A and C, Class 2, Category 1). U.L. Approved

IN STOCK

The Birnbach Line of insulated sleeving and tubing is the basic quality line designed for the rigid performance requirements of the Aircraft, Electrical and Electronic Industries.

Meets or exceeds the required MIL Specifications and ASTM and NEMA standards. We invite your inquiries on special problems and requirements.

B-65 — EXTRUDED PLASTIC TUBING LOW TEMPERATURE — Per MIL-I-7444B to —94° F.

No. B-65 meets Air Force spec. Mil-I-7444 specifically designed for operation at sub-zero temperatures. It is fungus resistant and has excellent dielectric strength.

B-130 — VINYL COATED/FIBERGLASS SLEEVING Per MIL-I-3190B and NEMA Standards to 130° C.

(ASTM, NEMA Grade B-B-1) MEETS MIL-I-3190 SPECS. — Quality Electronic and Electrical Tubing. It is Class B Insulation that combines the best features of the inorganic fiberglass base sleeving with heat resistant, flexible plastic insulation. The plastic compound provides the highest electrical properties, heat stability (130° C.), flexibility and toughness. Meets performance requirements of specs. MIL-I-3190 A, NEMA VSI, ASTM D 372.

B-1200 — FLEXIBLE FIBERGLASS SLEEVING for Hi-Temperature — applications for 1200° F.

HIGH TEMPERATURE FIBERGLASS SLEEVING — Sleeving of tightly braided 100% fiberglass intended for temperatures as high as 1200° F. It provides maximum mechanical strength consistent with the ultimate in flexibility. It is treated to remove all organic matter as well as keeping the glass braid fray resistant. We can provide special construction to 1/16" double wall construction. It can be colored for coding purposes.

Birflon — TEFLON* SPAGHETTI TFE EXTRUDED TUBING

T-500 & T-550 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components. Its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures.

Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron — therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

ADDITIONAL ADVANTAGES OF BIRFLON T-500 TEFLON*

- **ELECTRICAL:** Low power factor, low dielectric constant, high volume and surface resistivity, good dielectric strength (500 to 1000 volts/MIL) constant over wide ranges of temperatures and frequencies. Dielectric constant of 2.0 and dissipation factor of 0.0002 are lowest of any solid dielectric.
- **THERMAL:** No change of electrical properties with temperature (25°C. to 250°C.) or frequency (60 CPS to 100 MC). Class C insulation — capable of continuous service at temperatures to 250°C. Has color stability.
- **TOUGHNESS AND FLEXIBILITY:** Has high impact strength. Is tough and flexible over the broad temperature range of —90°C. to 250°C. Service range —320°F. to 500°F.
- **CHEMICAL INERTNESS:** Completely inert to all chemicals and solvents except molten alkali metals and fluorine at elevated temperatures and pressures. Non-corrosive to all metals.
- **MOISTURE ABSORPTION:** Zero moisture absorption. Completely sun and weather resistant.
- **NON-FLAMMABLE** ● **LOWEST COEFFICIENT OF FRICTION**
- **FUNGI RESISTANCE:** Inert to all fungi growths.
- **SIZES:** Birflon T-500 Teflon Tubing available in sizes to fit B & S gauge wires. Thin wall available from stock, in sizes No. 32 thru 1¼" I.D. Additional sizes and wall thicknesses made to order.
  Birflon T-500 is made from high molecular weight virgin "Teflon" and meets AMS 3651B, 3653B, 3654, 3655, MIL-C-17B and MIL-I-22129C.

NOTE: When cutting Teflon Tubing, use single edge razor blade for clean unpinched cut.

HEAVY FORMVAR (HF) TYPE T2—MILC-583C

Single conductor round bare copper, baked film insulation from a varnish based on a vinyl acetal resin. 105°C.

Has new tough abrasion resisting film. Replaces enamel and fabric insulations for certain applications requiring exceptional abrasion resistance. Stable under heat. High dielectric strength. Infinite resistance to water and moisture. Does not fail after two hours at 105°C. Takes up less winding space.

TUBULAR BRAID PER MIL SPEC. QQ-B-575

Manufactured completely round as noted in MIL Spec. QQ-B-575, this tinned copper shielded braid has self-supporting characteristics which enables it to maintain its round shape. The shielding coverage percentage is 95% or more. This tubular braid is used in military applications where maximum shielding against electrostatic interference is indicated. In addition, it is used as a protective covering against mechanical abrasion and stresses for the wires, cables and other components.

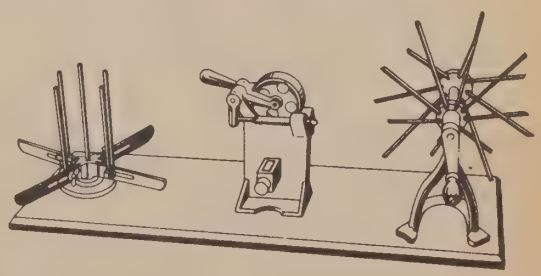
MEASURING MACHINE.

Sturdy and compact construction. Has a precision quality built counter with large numbers for easy reading and will register wire up to .9,999 feet for direct accurate reading. Can be easily reset to zero position.

Wire passes through two rollers, the upper roller being self-adjusting and the tension of the upper roller can be set by a thumb screw to provide the proper grip for very fine as well as for heavy wire.

Two hardened lead bushings with an opening of 1/8" diameter will guide the wire properly through the rollers. Bushings are removable to allow cables up to 1" dia. to pass through. Will measure accurately all electric wires, cables, coaxial cables, rope, tape, etc.

WIRE WINDER



Has adjustable arms to be set to the desired coil size and the arms will open to a flat position for easy removal of the coil. Simply open thumb screw which holds the front collar tight on the shaft, push the collar in any direction to the desired position and tighten the thumb screw again.

HOLDING REEL

Compact, adjustable to size of coil and folding. Will hold spools or coils of wire.

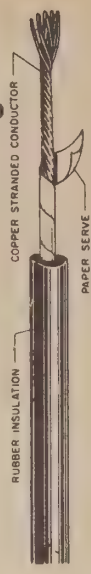
TEST LEAD WIRES

KINKLESS TEST LEAD WIRE

Used with portable test equipment; as tested, leads in analyzers, oscillators, instruments; wherever extreme flexibility and limpness is required. Has excellent dielectric properties.



DESCRIPTION: **RUBBER INSULATED**

No. 61—#20—41/36 extra flexible annealed tinned copper, stranded.

No. 66—#18—65/36 extra flexible annealed tinned copper stranded; paper serve; 3/64" special low capacity rubber, wax finish.

Colors: Red, Black.

Types WS-16/U Black, WS-17/U Red; No. 70 per MIL-W-13169 Specification available same construction as Birnbach #66 except compound per specification.

NEW PLASTIC KINKLESS TEST LEAD WIRE

New formulation vinyl compound insulation allows maximum flexibility; rough treatment; extreme variation in climatic conditions; excellent abrasion resistance; greater temperature stability from —80°C to +115°C; fungus resistant; self extinguishing-flame proof; smooth surface. Resists exposure to gasoline and oil. 5000 volts.

DESCRIPTION: One conductor tinned copper stranded, special formulation vinyl insulation.

Colors: Black, Red, Yellow, Green, White, Blue.

U.L. HOOK-UP WIRES

KYNAR® "WIRE WRAP" WIRE — UL APPROVED (POLYVINYLDENE FLUORIDE) INSULATED, 130°C 300V

Description: Solid silver plated copper, Kynar insulation

Applications: Especially designed for use on computer back panel wiring in conjunction with "wire wrap" systems. Kynar insulation is particularly suited for this application because of its cut through resistance, high temperature rating and because it can be made available in long lengths

RETRACTILE CORDS

This series of Birnbach Coiled Kinkless Retractile Cords are permanently coiled into a spring-like shape without the use of metal springs or elastic bands. They have inherent "Recovery" properties. These Retractile cords extend approximately six times its retracted length, returning to its original shape and length when released. Always as long as you need them and no longer, they will not kink, tangle, trail, knot or dangle on the floor or bench and cause accidents. Useful wherever cords or cables must change length or position.

RETRACTILE (KINKLESS) COILED SHIELDED COMMUNICATION CORDS

DESCRIPTION: Single and multi-conductor shielded microphone cable neoprene or geon plastic jacketed. This cable remains neat and compact with no danger of tripping or of the wire becoming entangled in equipment. Also suitable for stereo and additional speaker extensions. Shield can be pigtailed for soldering. No. 24 AWG Str. is 41/40 tinned soft cad. copper: No. 23 has 21/36 tinned soft cad. copper. Spiral wrapped tinned soft copper shielding.

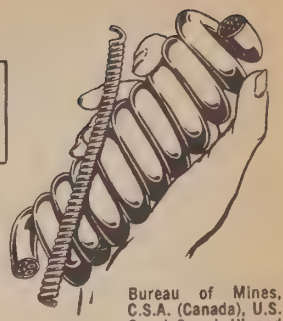
RETRACTILE HEAVY DUTY AND POWER CORD SETS

RETRACTILE Super Heavy Duty POWER CORDS



GUARANTEED TO RETRACT FOR 4 YEARS MILITARY INDUSTRIAL. AWG SIZES — 12, 14, 16, 3 and 4 COND.

Especially desirable in the maintenance of **industrial automation** equipment, refrigerated trucks and trailers, mass assembly and production equipment, plane maintenance, control cable for cherry pickers, magnetic cranes, standby power distribution, heavy duty machinery.

Useful whenever and wherever a tougher, more rugged heavy duty power cable is indicated as in foundries, aboard ships, reelins on overhead cranes and hoists, tanks, plug-in power for refrigeration and immersion heaters, etc. Usable around salt water, chemicals and many other areas which makes the use of reels undesirable . . . 48" retracted — 25' extended.

NEW! All Birnbach Retractiles Available in One Foot Lengths.

DURAFOAM®

The outstanding success of Durafoam can be attributed to Durafoam's superior performance over the full spectrum of VHF, UHF and FM channels. The increasing popularity of UHF channels make mandatory the use of a low attenuation cable. Durafoam has been used to improve reception under the most adverse conditions such as moisture, ice, heavy snow, chemical fumes, salt air and other factors that seriously affect most transmission lines.

COLUMBIA 5790 DURAFOAM *VHF – UHF* TV TRANSMISSION LINE U. S. PAT. #3,219,752, CANADIAN PAT. #736,090

VHF • UHF • COLOR • FM Transmission Line

Durafoam installs as easily as flat ribbon line, requiring no special stand-off insulators. Columbia's time proven high molecular weight black polyethylene PERMALINE jacket is so durable that we unconditionally guarantee that Durafoam will not deteriorate for a period of 15 years when used under normal atmospheric conditions. Durafoam's patented design of isolating the 2 foam polyethylene dielectric tubes from each other reduces attenuation. All other types of transmission lines available today have a common dielectric surrounding the copper conductors so that both conductors are affected simultaneously by any combination or other factors in the dielectric which cause increased attenuation.

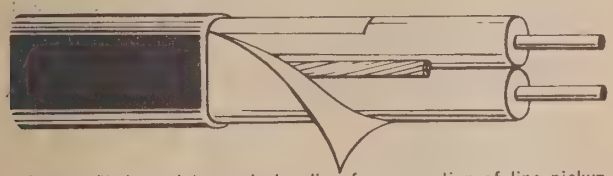
THRIFTFOAM®



Columbia's answer to a growing need for a quality-built, low cost foam transmission line. THRIFTFOAM will deliver clear, sharp reception under adverse conditions. Features a cellular foam polyethylene inner dielectric, providing lower capacitance and lower attenuation losses. Two stranded copper conductors. Jacket: weather-resistant black polyethylene for durability and line protection. THRIFTFOAM is easy to install . . . requires no special stand-off insulators or expensive matching transformers and connectors.

SUPER-FLEX® COAXIAL CABLES

Finest coaxial cables available – not only because of appearance and flexibility, but because they actually outperform similar cables now on the market. Cables feature high gloss jackets and have foam polyethylene primary insulation to reduce attenuation as much as 25% below regular coaxial cables. Super-Flex cables stay flexible in severe cold. They use standard connectors. Ideal for citizens band and amateur use. Perfect for MATV. Standard stock colors are Black-white-silver and Beige. Other colors to special order with a minimum of 10,000′ of a color.

PERMAFOAM® LOW LOSS COAXIAL CABLES

A foam polyethylene dielectric replaces the conventional solid polyethylene thus providing far lower capacitance and attenuation. Overall jacket is our PERMALINE® high molecular weight polyethylene. This non-contaminating jacket is unaffected by salt air, chemical fumes, damp rot, fungus, acids, alkalis, etc., and is immune to the deteriorating effects of sunlight and other ultra-violet.

RG 11U SELF-SUPPORTING MESSENGER TYPE

Low loss weatherproof coaxial cable for CATV systems and other applications requiring steel messenger cables for long runs. Eliminates need for stringing separate messenger cables. 3/16″ seven strand glv. steel messenger has tensile strength of well over 3000 lbs. . . . cannot rust . . . is protected by the same insulation used on all Columbia PERMAFOAM coaxial cables. Unique cable design allows for easy removal of outer insulation at terminating points. Overall dimensions: width .760″, coaxial cable .405″, messenger .300″. Available cut to length. CAT. NO. 5020 – RG 11U, Conductor 14 Solid, 75 OHMS, 66% V.P., MMF/FT. 16.2.

MICROPHONE/SHIELDED Power Supply and Control Cables

ALL TYPES STRANDED

COLUMBIA EXCLUSIVE FLEXFOAM® MICROPHONE CABLES

Flexfoam Cables offer up to 35% lower capacitance than the best regular microphone cables available today . . . made possible by the use of foamed polyethylene inner dielectric instead of the solid polyethylene normally used. This low capacitance means cable runs can be increased as much as 50% over standard cables. Flexfoam cables are also ideal for Hi-Fi and high quality sound work because of their extremely low attenuation, particularly at the higher audio-frequencies. A special flexible vinyl outer jacket provides flexibility almost as good as rubber plus a big increase in abrasion resistance.

LOW-IMPEDANCE NOISE-RESISTANT 2 CONDUCTOR 22 Ga.

Here is a newly designed Microphone Cable that will withstand the severe abuse that has been a problem with microphone cables used in theaters, night clubs, etc. Cable can be handled roughly without danger of copper strands in shield breaking to cause noise. In this new cable a heavy duty spiral tinned copper shield is applied over a primary shield of conductive vinyl. Repeated tests have shown that this will far outlast conventional shielded two conductor microphone cables. Remarkable flexibility is obtained by use of a Columbia Flexlife Silver Gray Jacket that also imparts an excellent appearance. Silver-gray only. Approx. size .235. Cap. per ft. 35 MMF. Cat. TELEPHONE AND COMMUNICATION CABLE

AERIAL & DUCT INSTALLATION — MEETS REA-PE-22

Description: Each conductor bare solid copper, color coded polyethylene insulation, insulated conductors paired, pairs cabled with non-hygroscopic tape wrap, .008" corrugated aluminum shield, black polyethylene jacket overall.

Characteristics: Average mutual capacitance — .083 microfarads/mile. Minimal cross talk.

Applications: A tough, long lasting communication cable that can withstand moisture, ultra-violet and weathering.

#22 AWG — SOLID

Description: Each conductor bare solid copper, color coded polyethylene insulation, insulated conductors paired, pairs cabled with non-hygroscopic tape wrap, polyethylene inner jacket, .005" corrugated copper shield, black polyethylene jacket overall.

Characteristics: Average mutual capacitance — .166 microfarads/mile. Minimal cross talk.

Applications: Impervious to moisture, abrasion resistant, suitable for direct burial.

TELEMETERING & DATA SHIELDED CONTROL CABLE

STANDARD PUT-UP: CUT TO SPECIFICATION — MIN. 25 FT.

Description: Each conductor bare solid copper, high molecular weight polyethylene insulation, color coded, twisted into pairs, cabled with a non-hygroscopic binder tape .008" aluminum shield, black polyethylene jacket overall. Operating voltage 300 volts.

Double jacketed types, (8306-8420 below) same except for additional inner black polyethylene jacket over binder, and .005" copper shield.

Applications: Remote control of rocket recording data and test-firing control, transmission of signals which telemeter temperature, voltage, pressure, etc., control of multiple circuits, measuring devices, quality control equipment, radar antenna. For aerial, duct and conduit installations. Double jacketed types have higher dielectric strength and suited for direct burial installations.

PROTECTA-METAL SPOOLS

Popular, profitable specialty wire packaged for easy selling in radio-electrical, scientific, specialty and hardware.
Wide variety of sizes and insulations.
Keeps stock in perfect order, always saleable.
Supplied on Spools as Shown and in Heavier Weights.
Here is a handy and convenient way to stock small quantities of wire. It prevents wire from matting or tangling.

MAGNET WIRE #2000

The correct wire for practically any application. Magnet wire is indispensible in the manufacture and repair of both radio and audio frequency coils, transformers, chokes, speaker field coils, short wave coils, tuners, transmitters, etc. Also widely used in the construction and repair of motors, generators, dynamos, etc.

Larger Quantities At Same Per Pound List

SPECIAL MAGNET WIRES

In addition to the standard listing shown here, we maintain an extensive stock of all other sizes in round, rectangular and square magnet wire.

RESISTANCE WIRE #2000

ON PROTECTA-METAL SPOOLS

Recommended for electrical heating appliances and other devices where the hghest quality in performance is required, whose operating temperatures do not exceed 1850°F. Particularly suited for heavy duty rheostats and controls which require compact resistance.

DAFLEX 105 PLASTIC TUBING

105°C POLYVINYLCHLORIDE (PVC) MEETS MIL-I-631D SPECS

Specifically compounded vinyl resins for superior all around performance. UL approved for 105°C, conforms to Spec MIL-I-631D Type F, Form U, Grades A and C. Class 1 and 2, Category 1. Resistant to heat, oil, water, chemical corrosion, fungi and aging. Very hi abrasion resistance. Will retain its flexibility. Suitable for covering and protecting wires and cables. Designed for electrical, electronic and aircraft applications. Non-flammable. Meets ASTM—D876, ASTM—D922.

D105 compounded with non-migratory resin type plasticizors. Retains its flexibility, permitting it to cling and protect irregular shapes. D105 snakes well under practically all conditions.

DAFLON TEFLON® SPAGHETTI TUBING

Daflon 500 and 550 tubing is extruded from Dupont Tetrafluoroethylene resin and is unmatched by any other tubing for use in applications for hi frequencies and hi temperatures. Rated for continuous operation of 250°C it retains its toughness and flexibility thruout. Has high resistance to fatigue and stresses. Will not shrink back during soldering operation. Non-flammable, flexible, it permits miniaturization of design and compactness. Lowest coefficient of friction. Inert to all fungus growth. Conforms to **MIL-I-22129C Spec.** AMS 3651B, 3653B, 3654, 3655.

DAFLEX VINYL COATED FIBERGLASS TUBING 130°C
MEETS MIL-I-3190B SPECS (ASTM, NEMA GRADE B-B-1)

DAFLEX 130, Class B, Grade B-1 is recommended for continuous temperatures up to 130°C. Constructed to provide a tough, flexible, heat resistant tubing. Made from an inorganic fiberglass base sleeving with heat resistant coating, extremely flexible tough plastic insulation. Will not support combustion. Meets MIL-I-3190B, NEMA VSI ASTM D372. MIL-1-21557.

HEAT SHRINKABLE TUBING

SHRINKABLE IRRADIATED POLYOLEFIN TUBING

This series is designed for maximum mechanical strength at stress or points of connection. It is strong and abrasion resistant and is supplied in expanded sizes. It insulates, jackets, splices, encapsulates, weatherproofs components, connectors, cables and irregular shaped objects. When exposed to heat (300°F) the tubing shrinks 50% in diameter, 5% longitudinal contraction. Controlled shrinkage to exact requirement takes place. Meets or exceeds MIL-I-23053B/5 Class 1 and 2. Available with UL approval. AMS 3636B 3637A.

DABURN SHRINKABLE POLYVINYLCHLORIDE ALL PURPOSE

Shrinkage Ratio: 2:1 (50%)

Flexible, shrinks 50% on heat application, less than 10% longitudinal contraction. Suitable for insulating components and cables in varying shapes and diameters. Has a higher resistance to oils than low density polyethylene. Conforms to MIL-I-631D, Type F, Form U, Grade A and C, Class 1 and 2, Cat. 1. Controlled shrinkage on application of heat to predetermined size takes place at temperatures below 200°F (one minute or less). Meets or exceeds MIL-I-23053B/2 Class 2.
OPERATING TEMPERATURE: —20° to +105°C.

HEAT SHRINKABLE TEFLON‡ TUBING

DAFLON SH-400 (FEP)

Made with Modified TEFLON* FEP will shrink over inserted objects upon exposure to moderate heat. Heretofore, many joints, parts, components, devices could not be protected because of hi temperature required for shrinkage. FEP TEFLON*, which has a continuous service temperature of 400°F., will shrink at 300°F. Supplied in natural (transparent) color. Complete shrinkage at 350°F. Now, many heat sensitive products can use the permanent protection of TEFLON.* Will not burn or support flame, long lengths available. Will not split, melt, or cold flow. Extruded.

TUBULAR BRAID PER MIL SPEC QQ-B-575

Tinned copper shielded braid mf'd completely round per Mil Spec QQ-B-575. Maintains its round configuration. Shielding coverage is 95% or more. Used in military applications where maximum shielding is required against electrostatic interference. Useful against mechanical abrasion and stresses for cables — as grounding cable.

DAPRENE™ HEAT SHRINKABLE NEOPRENE* TUBING

This unique tubing meets or exceeds MIL-T-23053B specs. Shrinks down to under 33% of its supplied inside diameter. Upon exposure to heat of 160°F — will remain elastomeric — with no cracks (longitudinal shrinkage 50%). Will protect components, solder joints, terminals, fittings, harnessing and jacketing of wires, medical equipment, etc. Resistant to abrasion, flame, chemicals. Suitable electrical and mechanical properties. Has continuous range of −67° to +212°F. Tubing is self extinguishing when flame is removed. Variety of intermediate recovered sizes. Available expanded sizes: 1/2", 1", 1 1/2", 2". **COLOR:** Black. Tubing must be stored below 100°F.

PROPERTIES:

COPPERWELD ANTENNA WIRE

Used where high tensile strength is required as for short wave and transmitting aerials. Has low R.F. resistance and is ideal for transmitting doublet and directional antennas. Will maintain frequency characteristics because of its stretchless qualities. 40% conductivity.

SUBMINIATURE TEFLON* HOOK-UP WIRE
PER MIL-W-16878D — TYPE ET — 250 VOLTS, 200°C

Thin miniature hook-up wire is suitable in miniature slip ring assemblies, as interconnecting wire between wafers in microminiature electronic circuitry, instrument wire, medical wire, subminiature thermo-couple lead wire, strain gauge wire, etc. Provides lighter weight, greater flexibility and hi temperature resistance. Size Nos. 32 thru 20 conform to MIL-W-16878D type ET 250 volts, 200°C. Silver plated copper conductor.

NEW CRT HI-VOLT CORONA RESISTANT TEFLON* CABLE©

Voltage Rating at Sea Level • Voltage Rating at 80,000 feet, approximately 1/3 lower
• Minimum life expectancy: 10,000 hours.

SMALL SIZE:
You do not need bulky, thick, insulation jacketing as used with silicone rubber and polyethylene insulations to get your hi-voltage requirements. Wire used is MIL-SPEC QQ-W-343 and MIL-W-16878D. Insulation used conforms and surpasses MIL-SPEC-W-16878D

AVOID CORONA PROBLEMS:
Corona resistant Teflon construction is specifically designed to retard and prevent corona penetration.
Temperature variations from −60° to +300°C have no life effect on the corona resistant Teflon. In addition, there is no stress or crack failure under severe, adverse conditions including mechanical strain, moisture, corona or chemical conditions.

DESCRIPTION:
Single Conductor, Stranded Silver Plated Copper, Corona Resistant Teflon* Insulation.

TEMPERATURE RATING:
−90°C to +250°C.

VOLTAGE RATING:
Based on insulation thickness.

AVAILABLE COLORS:
White, Black, Red, Green, Yellow, Lt. Blue, Brown, Orange, Gray, Violet. (Also available in tracer colors)

PUT-UP: 250′, 500′, 1000′

H FILM KAPTON* WIRE

DALITE™

HIGH TEMPERATURE HOOK-UP AND AIRFRAME WIRE 200°C CONTINUOUS TEMPERATURE RATING (a)

INSULATED WITH DUPONT KAPTON* POLYMIDE FILM WITH TEFLON* — FEP HEAT SEALED COATING CONFORMS TO MIL-W-81381.

CHARACTERISTICS: Dalite™ insulated wire provides high temperature stability, low temperature flexibility, high radiation resistance, resistance to cold flow, impervious to most chemicals, high dielectric strength, low dielectric constant, smaller diameters and lighter weight than any other comparable wire used for continuous operation up to 200°C. This hook-up wire meets the test requirements of MIL-W-16878 for 300 V, 600 V and 1000 V with **smaller wall thicknesses, weight and dimensions.**

(a) Temperature based on lowest temperature rating of materials in the insulation — FEP 200°C. Will pass 96 hour heat age tests at 290°C per MIL-W-16878.

DESCRIPTION: Single conductor, silver plated annealed copper conductors, Type H* Polymide film with Teflon* FEP coating tape wrapped overall.

CONTROL AND INSTRUMENTATION CABLE, TYPES F & FF PER MIL-W-16878D PLASTIC, SILICONE RUBBER HOOK-UP WIRE — HIGH VOLTAGE CABLE, UL & CSA HOOK-UP WIRE

MINIATURIZED SHIELDED CONTROL AND INSTRUMENTATION CABLE

PER MIL-W 16878D — TYPE B — 600 VOLT

DESCRIPTION: Each conductor stranded tinned copper, .010" wall high temperature PVC, cabled with a mylar tape wrap, braided tinned copper shield for 90% coverage overall, covered with gray PVC jacket.

Rated: −55°C to +105°C, 600 volt.

Resists acid, alkalis, flame, moisture, oil, solvents, fungus. Used as interconnecting cable for electronic equipment; control and instrumentation cable, telemetry and remote control with sensitive recording instruments.

HEAVY DUTY MULTI-CONDUCTOR
PORTABLE TYPE SO
NEOPRENE JACKETED — 600 VOLT

DESCRIPTION: Stranded bare copper each conductor, rubber insulation color coded, filler where necessary, wrap over conductors, flexible heavy duty black Neoprene jacket overall.

Recommended for outside installation, this heavy duty control cable resists oil, ozone, sunlight, moisture, impact and abrasion. Suitable for remote control automatic equipment, telemetering, signal transmission.

TELEPHONE CABLE

(Meets REA-PE-22)

EXCHANGE AREA — COMMUNICATION CABLE AERIAL, DUCT AND CONDUIT INSTALLATION

DESCRIPTION: Color coded polyethylene insulation over each bare copper conductor. Conductors are paired. Pairs are cabled with non-hygroscopic tape wrap, corrugated aluminum shield, .008" thick and black polyethylene jacket overall.

Minimal cross talk .083 microfarads/mile — average mutual capacitance, 1 KC. This is a tough, long lasting cable — withstands weathering, ultra-violet and is abrasion resistant.

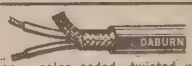
SHIELDED PLASTIC MICROPHONE CABLE

Will withstand abuse and is resistant to oil, moisture, aging. Have low capacitance, Hi insulation resistance and low attenuation. Will not strain or mark.

2772 — For hi impedance microphone
2773 — For crystal, ribbon, etc. Mikes all are suitable for hi-fi interconnecting
2774 — For hi impedance lapel mikes.

OPERATING TEMPERATURE: −20°C to +60°C.



SHIELDED MICROPHONE CABLE ONE CONDUCTOR

Uses tinned copper spiral shield — for ease in soldering — extremely flexible-plastic.

SHIELDED ULTRA LOW CAPACITY MICROPHONE CABLE
Plastic Jacket — Cellular Foam Polyethylene Insulation BRAIDED SHIELD

DESCRIPTION: Constructed with white foam polyethylene insulation, braided tinned copper shield, chrome gray vinyl jacket. The low loss foam polyethylene construction has lower capacitance and attenuation than standard polyethylene mike cables as much as 50%. This increases the effective length of cable as much as 50% without signal loss.

Neoprene Jacketed Control Cable 600 Volts

APPLICATIONS: Designed for heavy duty use in relay control, power and signal transmission, lighting, motor and turbine control, telemetering, switching control of automatic electronic and electrical equipment, substation operations, traffic control and fire alarm control. Neoprene has exceptional flexibility, mechanical strength and suited for either indoor or outdoor installation.

CONDUCTOR: Stranded bare copper-minimum strands*
INSULATION: Color coded rubber per National Electric Code standards
CABLING: Cabled with fillers when necessary, separator over conductors
JACKET: RUGGED BLACK NEOPRENE
VOLTAGE TEMPERATURE RATING: 600 Volts - 60°C
STANDARD PUT-UP: Cut to requirements.

Paired Intercom Cable

UNSHIELDED MULTIPLE PAIRS - PLASTIC JACKET

APPLICATIONS: Multiple speaker and sound cable, balanced intercom systems providing a quiet circuit free from cross talk telephones, hospital call systems, signal and alarm systems.

CONDUCTOR: Solid or stranded tinned copper
INSULATION: Color coded PVC
PAIRED: Conductors paired with short lay for balance and easy identification
CABLING: Pairs cabled with open binder when necessary
JACKET: FREE STRIPING CHROME GRAY PVC
VOLTAGE RATING: No. 22 gauge - 200 Volts RMS
No. 18 gauge - 400 Volts RMS
STANDARD PUT-UP: Cut to requirements

NATIONAL WIRE & CABLE CORPORATION

MULTIPLE CONDUCTOR CONTROL CABLES

IN STOCK
MIL-SPEC

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105°C per MIL-W-16878D Type C†. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per MIL-STD. 122.

All conductors are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105° C black polyvinyl-chloride thermoplastic, meeting specification MIL-I-631 Class F, or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene jackets at added cost.)*

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

*(Standard put-up for Neoprene jacketed cable is 250 ft.)

†Insulated Conductors are also UL approved under UL type 1007 AWM, and are CSA approved as type TR 64.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on gauge and position.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MULTI-CONDUCTOR STOCK CABLES

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.

NATIONAL WIRE & CABLE CORPORATION

MULTIPLE PAIR SIGNAL & CONTROL CABLES

IN STOCK
MIL-SPEC

Identical to National's NW-Series Cables except offered as twisted pairs.

National Wire & Cable Corporation manufactures a complete line of multiple pair control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105° C per MIL-W-16878D Type C. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per table below.

All pairs are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black vinyl plastic per MIL-I-631; or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene at added cost).

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8,000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance wire to wire for a pair ranges from 27. to 40. mmfd/ft. Capacitance from both wires tied together measured to all else in common ranges from 35. to 60. mmfd/ft. dependent on gauge and position. Overall shield has negligible effect on W-W capacitance.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MINIATURE SIGNAL & CONTROL CABLES

IN STOCK
U.L. APPROVED COMPUTER GRADE

National Wire & Cable Corp. manufactures a complete line of MINIATURE low voltage signal and control cable. Available as cabled pairs or cabled singles, with optional overall shield. Conductors are stranded tinned copper with .010" wall of vinyl primary insulation for use up to 105°C. per MIL-W-16878 Type B. Insulated for **600 volts** working voltage. (Also meets U.L. AWM Type 1061; 300 volt, 80°C.) All are coded using 10 standard colors plus stripes on white per MIL-STD-681.

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape barrier under shields. Shielded cables have a tinned copper braid overall, of 85–90% coverage per MIL-C-7078; and braid angles below 40° for easy pushback.

The outer jacket is black abrasion-resistant 105°C. vinyl meeting MIL-I-631 Type F. All materials are self-extinguishing and fungus resistant. All items are U.L. APPROVED STYLE 2343 COMPUTER CABLE; rated 300 volt, 80°C. (Higher temp. ratings apply for any non-U.L. service.)

Standard Putups: 500 & 1000 ft. No-deposit reels.

*Denotes U.L. Style 2344.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 5000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 45. to 70. pf/ft at 1. kc, depending on gauge and position.
Insulation Leakage:	200. megohms/1000 ft. min. @ 500. VDC from any conductor to all else in cable.
Sheath Leakage:	10. megohms/1000 ft. min. @ 500 VDC from shield or conductor group through sheath to ground.
Temperature Range:	Suitable for continuous use from −40°C. to +105°C. (U.L. Service limited to +80°C.)
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6. cable diameters from +105°C. to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°C.

NATIONAL WIRE & CABLE CORPORATION

MILITARY & U.L. GRADE RFI SHIELDED PAIR CABLES

MEETS U.L. STYLE 2343 OR 2344 FOR COMPUTER USE.

SHIELDED PAIR CABLES

SIGNAL & CONTROL CABLES

National Wire & Cable Corp., manufactures a complete line of flexible multi-pair cables in which each pair is individually twisted, shielded and plastic-jacketed.

Provides a minimum of crosstalk between signal channels, plus complete isolation between shields. Excellent for analog signals. All jackets moisture-proof. Suitable for use in duct, conduit, aerial or burial installations.

Conductors are stranded tinned copper with .010″ vinyl primary insulation, plus .004″ nylon insulation over the vinyl per MIL-W-16878 Type B. Insulation for 600 volts working rating at 105°C. Color coded: White and black (all conductors are 19 strand.)

Shielding is tinned copper braid with 90% minimum coverage per MIL-C-7078, and shield angle below 40 degrees for easy push-back.

Jackets over shields are extruded 105°C white polyvinyl chloride plastic per MIL-I-631, Class F; Color coded with stripes per MIL-STD-681, starting with 9.

All pairs are planetary cabled and contra-helically laid with a mylar tape serve over the cable bundle. The overall sheath is abrasion-resistant black 105°C vinyl thermoplastic per MIL-I-631, Class F.

Optional overall shielding of cabled bundle is 90% minimum coverage of tinned copper braid applied per MIL-C-7078 over the tape serve under sheath.

STANDARD PUT-UPS: 500 & 1000 FT. ON NO-DEPOSIT REELS.

TECHNICAL DATA

Insulation Breakdown Voltage: Greater than 5000 volts RMS, 60 hz.

Capacitance: (mmfd/ft.)

AWG	Wire-Wire	Wire-Shield
22	37	64
20	44	77
16	55	96

Insulation Leakage Resistance: 200 Megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.

Sheath Leakage Resistance: 10 Megohms/1000 ft. min. at 500 VDC from overall shield through sheath to saline bath at 25°C.

Usable Temperature Range: Suitable for continuous use from +105°C to −55°C when stationary. Flexing service: +105°C to −25°C.

Cold Bending Capability: All cables are suitable for bending to a circle diameter of 8 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters at −40°C.

Crosstalk: Common-mode, adjacent pairs: Worst case, −50 db @ 1 mhz; falling to −100 db below 100 khz. (Ref. MIL-C-23437 for test method.) For 100 ft. test length.

MIL-SPEC FOR ROUGH USAGE & EXTREME ENVIRONMENTS

TEFLON®-INSULATED CABLES

SIGNAL & CONTROL CABLES

National Wire & Cable Corp., manfactures a standard line of TEFLON®-INSULATED multi-conductor signal and control cables designed for extreme environments and rough usage.

Construction is widely used in aerospace and industrial applications requiring a near-ultimate in cable physical and electrical performance plus high reliability.

Conductors are stranded silver-plated copper, insulated with .010″ of extruded TFE Teflon®; rated at 600 volts working from −65°C to +260°C per MIL-W-16878 Type E. Conductors are color coded using 10 standard colors plus spiral stripes on white per MIL-STD-681. (All conductors are 19 strand.)

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape wrap over the cabled bundle. The outer sheath is abrasion-resistant black Neoprene per MIL-S-6855, Class 2, Grade 60.

Optional overall shield is a 90% coverage tinned copper braid over the tape wrap per MIL-C-7078.

STANDARD PUT-UPS: 250 FT. LENGTHS ON NO-DEPOSIT REELS.

® Trademark, E. I. Dupont Co.

TECHNICAL DATA

Insulation Breakdown Voltage: Greater than 4000 volts RMS, 60 hz.

Capacitance: Nominal capacitance from a wire to all else in cable ranges from 25 to 45 mmfd/ft. dependent on gauge and position in cable bundle.

Insulation Leakage Resistance: 5000 Megohms per 1000 ft.; minimum from any wire to all else in cable.

Sheath Leakage Resistance: 20 Megohms/ft. minimum; from shield through sheath to saline bath after 24 hr. at 25°C.

Usable Temperature Range: Suitable for continuous use from −55°C to +75°C in flexing service or stored.

Cold Bending Capability: All cables are suitable for bending to a circle diameter as small as 4 times their diameter from −55°C to +75°C. Continuous flexing to less than 6 times diameter is not recommended below −40°C.

General Performance: All materials are self-extinguishing after exposure to flame. Non-nutrient to fungus. Highly resistant to ozone, oils, mild acids and bases, high humidity.

MIL-W-5086A

UNSHIELDED AIRCRAFT WIRE FOR ELECTRICAL SYSTEMS

Type I — AN-22 thru AN-12 — Single conductor stranded tinned copper, **white** polyvinylchloride insulation, clear nylon, (polyamide) jacket overall.

Type II — AN-22 thru AN-12 — Single conductor stranded tinned copper, **white** polyvinylchloride insulation, white glass braid, clear nylon (polyamide) jacket overall.

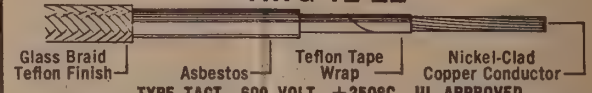
Type II — AN-10 thru AN-0000 — Single conductor stranded tinned copper, **white** polyvinylchloride insulation, white glass braid, flame retardant nylon lacquered nylon braid overall.

MIL-C-7078

UNJACKETED NYLON JACKETED SHIELDED CABLE

DESCRIPTION:
Base Wire
MIL-W-5086A

CHARACTERISTICS:
Temperature rating −55°C to +105°C. Voltage rating 600. Resists effects of water, alcohol, dilute acids, alkalis, oil, aircraft fuels, hydraulic fluid, skydral, ethyleneglycol, fungus and abrasion.



HIGH HEAT RESISTANT POWER CABLE MIL-W-7139B

For use in aircraft, missiles, and other applications where elevated temperatures are encountered. 600 Volt Teflon and glass insulated cable for continuous operation. −200°C or 260°C depending upon conductor class.

Class 1 — Silver coated copper to −200°C (White with blue tracer, tan available with same specifications).

Class 2 — Nickel coated copper to +260°C (White with orange tracer, tan available with same specifications).

AWG 12-22

TYPE TAGT 600 VOLT, +250°C UL APPROVED

TAGT will withstand severe environments such as high humidity, salt spray, alkali, acid, and corrosion. Highly abrasive and cut resistant.

AWG 4/0-24

TINNED COPPER Uninsulated

DESCRIPTION: Pure electrolytic, copper, annealed and tinned for quick soldering.

LITZ WIRE

A. Insulated wire.
B. Twisted wires, without textile insulation.
C. Outer textile insulation over the several groups of twisted wires.

The insulation on the individual wires may be Formvar, Sodereze (Polyurethane), Armored Poly-Thermaleze 2000 or ML. Sodereze is usually preferred because of its solderability. For most applications an over-all insulation of servings of Nylon is available, however, Silk, Cotton, Dacron, Nomex, and Fiber Glass can also be provided. We can provide Types I-V Lite Wire Construction with any gauge wire between 20 and 48.
